SEGOVIA, an antient, large, rich, populous, and handsome city of Spain, in Old Castile. Here the best cloth in Spain is made from the fine Spanish wool so much esteemed in other countries. This is one part of their trade, and another is very fine paper. The cathedral stands on one side of the great square, and contains the statue of Mary in massy silver. The castle, or alcazar is seated in the highest part of the town, is covered with lead, and has 16 rooms very richly adorned with tapestry, a great deal of gilding, and very fine ornaments of marble and porphyry. The royal chapel is magnificently gilded, and embellished with very fine paintings. The most remarkable structure is the Mint, seated in a valley, surrounded by a river, in which are mills employed in coining, and by which every thing is done almost instantaneously. The aqueduct is a work of the Romans, and serves to bring water into the town; it is 3000 paces in length, and supported by 177 arches of a prodigious height, consisting of two rows, one placed above the other. It is seated on a mountain between two hills, near the river Arayada, 45 miles N. W. of Madrid, and 67 E. by S. of Salamanca. Lat. 41. 0. N. lon. 3. 48. W.

SEIKS, THE, a numerous nation of Hindostan Proper, consisting of several small independent states, that have formed a kind of federal union. They possess the whole of Lahore, the principal part of Moultan, and the W. part of Delhi. This tract extends about 400 miles from N. W. to S. E. and is from 150 to 200 broad, in general, although, in the part between Attock and Behker, (that is along the Indus) the extent cannot be less than 320. Their capital is Lahore. We know but little concerning the state of their government, but it is represented as being mild. In their mode of making war, they are unquestionably savage and cruel. Their army consists almost entirely of horse, of which they are said to be able to bring at least 100,000 into the field. The Seiks, like the Hindoos, molest not others in matters of faith, and require only a conformity in certain signs and ceremonies; but, unlike the Hindoos, they admit proselytes; although those from among the Mahometans are the least esteemed.

SE'NNAR, a large town of Africa in Nubia, capital of a kingdom of the same name, which lies on the banks of the Nile, between Egypt and Abyssinia. It is 5 miles in circumference, and very populous, containing near 100,000 inhabitants. The houses are all one story high, flat-roofed, and very ill built, but the suburbs contain only cottages, covered with reeds. The king's palace is surrounded by high walls, of bricks dried in the sun, but is only a confused heap of buildings. The heats are excessive, and in the rainy season the air is extremely unwholesome. Their commodities are elephants' teeth, tamarinds, civet, tobacco, and gold-dust. There is a market every day in the week, in the middle of the town, where they sell all sorts of provisions and goods. They have also a market near the king's palace, where slaves are sold; the females sit on one side, and the males on another, and the Egyptian merchants buy great numbers of them every year. Their religion is Mahometanism. They are an ignorant, superstitious, and yet a cunning sort of people. The women who can afford it, have slight garments of silk, and wear rings of various metals on their hair, arms, legs, ears, and fingers. Their legs are naked, and they have only a single sole fastened to their feet with strings. Other women and girls have clothes wrapped round them from the waist to the knees. The men go almost naked. The merchandise required at Sennar are spices, paper, brass, hardware, glass-beads, and a black drug, with which they colour their eyelids and eyebrows. A few merchants here travel to Suaquen on the Red Sea, whence they go to Arabia Felix with their commodities, and bring those of the East Indies back. It is seated on an eminence near the river Nile.

SIAM, a kingdom of Asia, bounded on the N. E. by that of Laos; on the E. by Cambodia; on the S. by a gulf of the same name, and on the W. by the bay of Bengal. It is 550 miles in length, and 250 in breadth, though in some places not above 50. It is divided into the Higher and Lower, and the soil produces plenty of rice, cotton, and a variety of fruits different from those in Europe. The animals are also particular to those parts of the world. The French authors have extolled it as the finest and richest country in the world. The inhabitants, both men and women, go almost naked, except the wealthy, who wear rich garments for ostentation. The king shews himself but once a year to the common people. He is proprietor of all the lands in the country, and no one can buy any merchandise till he has the choice of them. He generally keeps a numerous army, among which are 1000 elephants. It is a flat country, which, in the rainy season, is overflowed; for which reason, most of the houses are built on pillars, and they have no communication for some months but by boats. There are mines of gold, silver, tin, and copper, and they have plenty of pepper, aloes, benjamin, and musk. The women are the only merchants in buying goods, the men being generally maintained by the industry of their wives. The Europeans that come there to trade, it is said, generally take wives for the time they stay, who are not less in esteem when the men are gone. The mandarins, that is, the principal men who daily attend the palace, are 3000 in number, and are whipt very severely, with split rattans, for the least fault. Even the women are not exempted from this punishment; and they are so far from being ashamed of it, that they expose their backs as they go along the streets, to show what they have undergone, thinking it an honour to be taken notice of by so great a king. The inhabitants have large foreheads, little noses, plump lips, and black sparkling eyes. Both sexes go bareheaded, and the men are of an olive colour, with little beards; but the women are of a straw complexion, and some have their cheeks a little red. They have abundance of wild animals in the woods, as elephants, rhinocerosses, leopards, and tygers. Their tame cattle are beeves, buffaloes, and hogs, of which they have plenty about their farms. Beside which, there are large and dangerous crocodiles, and serpents 20 feet long. Their temples and priests are very numerous; the latter are distinguished from the laity by an orange-coloured garment, and they keep their heads, beards, and eye-brows, close shaved. They have schools for the education of their children, and there is scarcely any among them but what can read and write. Odlam, Juthia, or Juda, is the capital.

SINDY, a province of Hindoostan Proper, bounded on the W. by Makran, a province of Persia; on the N. by the territories, of the king of Candahar; on the N. E. by those of the Seiks; on the E. by a sandy desert, and on the S. E. by Cutch. It extends along the course of the river Sinde, or Indus, from its mouth, to Behker, or Bhakor, on the frontiers of Moultan. Reckoned that way, it is 300 miles long; and its breadth, in its wildest part, is about 160. In many particulars of soil and climate, and in the general appearance of the surface, Sindy resembles Egypt; the lower part of it being composed of rich vegetable mould, and extended into a wide dell; while the upper part of it is a narrow slip of country, confined on one side by a ridge of mountains, and on the other by a sandy desert, the river

Indus, equal at least to the Nile, winding through the midst of this level valley, and annually overflowing it. During great part of the S. W. monsoon, or our summer quarter, which is the rainy season in most other parts of India, the atmosphere is here generally clouded; but no rain falls, except very near the sea. Indeed, very few showers fall during the whole year; and, at a time when Hamilton visited Tatta, no rain had fallen for 3 years before. Owing to this, and the neighbourhood of the sandy deserts, which bound it on the E. and on the N. W. the heats are so violent, and the winds from those quarters so pernicious, that the houses are contrived so as to be occasionally ventilated by means of apertures on the tops of them, resembling the funnels of small chimneys. Few countries are more unwholesome to European constitutions, particularly the lower part of the dell. The prince of this province is a Mahometan, tributary to the king of Candahar. He resides at Hydrabad, although Tatta is the capital. The inland parts of Sindy, produce saltpetre, salammoniac, borax, bezoar, lapis-lazuli, and raw silk. They have also manufactures of cotton and silk of various kinds; and they make fine cabinets inlaid with ivory and finely lackered. They also export great quantities of butter, clarified and wrapt up in duppas, made of the hides of cattle.

SMOLENSKO, a city of Russia, capital of the government of the same name. It is perhaps one of the most extraordinary cities in the world, is situated on the banks of the Dnieper, and extends over two mountains and the valley between them. It is surrounded by walls 30 feet high and 15 thick; the lower part of them is built of stone, the upper of brick and their circumference is four miles and three quarters. They are surmounted by towers three atories high, placed at the angles, between which are others of a smaller size; and in the plain, the walls are surrounded by a deep ditch. The houses are mostly of wood, and little better than cottages; they are only of one story, except a few scattered here and there, which are dignified with the title of palaces. The city is divided through its whole length by one straight, paved street, the others are circular, and floored with planks. The cathedral stands on an eminence, where there is a view of the whole city. The alternate rising and sinking of the walls from the inequality of the ground, their Gothic architecture, and grotesque towers, the steeples rising above the trees, which conceal the houses from the sight, the gardens, meadows, and cornfields, within the walls, all together form one of the most singular, picturesque, and varied prospects. Notwithstanding its extent, it contains only about 4000 inhabitants, and has no manufactures, but carries on, with Dantzic, Riga, and the Ukraine, a pretty considerable traffic in linen, hemp, honey, wax, leather, furs, &c. It is 197 miles N. E. of Novogrodeck, and 230 N. of Kiow. Lat. 54. 50. N. lon. 31. 22. E.

SOUL, (*sōl*) *s.* [*sawel*, Sax. *sael*, Dan. *sual*, Isl. *siel*, Belg.] the immaterial substance which animates our bodies. Various have been the opinions of men concerning the substance of the human soul. The Epicureans thought it a subtile air, composed of atoms or primitive corpuscles. The Stoics maintained it was a flame, or portion of heavenly light. The Cartesians made thinking the essence of the soul. Others hold that man is endowed with three kinds of soul, viz. the rational, which is purely spiritual, and infused by the immediate inspiration of God; the irrational, or sensitive which being common to man and brutes, is supposed to be formed of the elements; and the vegetative soul, or principle of growth and nutrition, as the first is of understanding, and the second of animal life. A vital and active principle. Spirit or essence. Inward power. A person. Spirit; fire; grandeur of mind.

SOUND, *a.* [*sund*, Sax.] healthy; not morbid; not hurt; hearty. Right, applied to knowledge. Stout, strong. Fast or profound, applied to sleep.

SOUND, *s.* [*sund*, Sax.] a shallow sea which may be sounded. A probe used by surgeons to examine what is out of the reach of their fingers. A perception raised in the soul by means of air put into motion, and vibrating on the drum of the ear, from *son*, Fr. or *sonus*, Lat. The cuttlefish.

SOUND, a strait between Sweden and Denmark, through which ships usually sail from the Ocean into the Baltic sea. It is about 4 miles broad, and here the Danes take toll of all merchant ships that pass into the Baltic.

To SOUND, *v. a.* to search with a plummet. To try or examine. To cause to make a noise; to play on. To betoken or direct by a sound. To celebrate by sound. Neuterly, to make a noise. To excite an idea by likeness of sound. To try with the sounding line.

SOUTCHEOU, a city of the first rank, in the province of Kiangnan, in China, beautifully and agreeably situated on a river which communicates with the lake Tai. It is extolled by the Chinese as an earthly paradise, for the delightfulness of the adjacent country, &c. The brocades and embroidery made here are highly esteemed.

SOUTH, *a.* meridional; southern.

SOUTH, *s.* [*suth*, Sax. *syyd*, Belg. *sud*, Fr.] that point of the heavens diametrically opposite to the north. The wind which blows from the south. Adverbially, towards or from the south. *South-east* is the point between the E. and S.

SOUTHAL, a town of Middlesex, with a market on Wednesday. It is 9¾ miles from London.

SOUTHAM, a town of Warwickshire, with a market on Monday. It is seated in a fertile soil, and has a considerable market for cattle. It is 8 miles S. E. of Warwick, and 83 N. W. of London.

SOUTHAMPTON, a large and handsome town of Hampshire, pleasantly situated on a fine inlet of the sea, called Trissanton Bay, or Southampton Water. This inlet is navigable almost to the head for vessels of considerable burden; and the two principal rivers that flow into it (the Itchen and the Test or Tese) admit small crafts some way up the country. The town is situated between these two rivers. It was formerly a port of great commerce, and still possesses a trade in French and Port wines; having a particular connection, moreover, with Guernsey and Jersey. It is a fashionable place of resort for sea-bathing; and it was on this beach that the Danish king Canute gave that striking reproof to his flattering courtiers; when the

disobedient tide washed his feet. Two miles from this town is Woodmills, where there is a very curious manufactory of ship-blocks. Southampton is 12 miles S. of Winchester, and 75 W. S. W. of London. Markets on Tuesday, Thursday, and Saturday.

SOUTHERLY, *a.* lying towards the south; not absolutely southern.

SOUTHERN, *a.* lying towards the south; coming from the south; belonging to the south.

SOUTHERNWOOD, *s.* in botany, the artemisia of Linnæus. There are four British species. The common wormwood is a species of it.

SOUTHING, *s.* in astronomy, applied to the moon, stars, or planets, when they are in the meridian, or due south.

SOUTHWARD, *ad.* towards the south. Used substantively, for the southern regions; as, "Countries are more fruitful to the *southward*." *Raleigh.*

SOUTHWARK, a town of Surry, which may be considered as part of the metropolis, being seated on the opposite side of the Thames, and under the jurisdiction of the lord mayor, who is its bailiff, with a steward and deputy bailiff under him. It is also one of the city wards, named Bridge Ward Without, and an alderman is chosen to govern it. It is called the *Borough* by way of distinction, and is a large and populous place, participating considerably in the commerce of London. The bishop of Winchester had formerly a palace here, with a park; when there were 18 brothels along the Bankside, licensed by that prelate, under certain regulations confirmed by parliament. The prostitutes kept here were commonly called *Winchester geese*. It is divided into two parts, the Borough Liberty, governed by the lord mayor; and the Clink, or Manor of Southwark, under the jurisdiction of the bishop of Winchester, who, by his steward, keeps a court-leet and a court of record on the Bankside. A court of conscience is established here, as well as in London. Southwark contains 6 parishes, a new Romish chapel, many places of worship for the Dissenters of various denominations; several charitable foundations, particularly those two noble endowments, St. Thomas's Hospital, and Guy's Hospital; together with the Magdalen Hospital; the Asylum for female orphans; the Freemason's School, a lately erected building, for the same purpose; the Philanthropic Reform, &c. Beside the King's Bench and Marshalsea prisons, and the county Bridewell, a new county-gaol, with a session house adjoining, has been lately built.

SOUTHWELL, an antient town of Nottinghamshire, 10 miles N. E. of Nottingham, and 139 N. W. by N. of London. Market on Saturday.

SOUTHWEST, *s.* the point between the S. and W.

SOUTHWOLD, a sea-port of Suffolk, is seated on a pleasant cliff, near a fine bay, and has a harbour to the S. with the river Blythe, and a drawbridge on the west. Here a much-esteemed salt is made, and it has an exportation of corn. It is almost surrounded by water, especially at every high tide. It is commonly called SOWLE or SOLE, and its bay is named SOLEBAY. Southwold is 20 miles S. of Yarmouth, and 104 S. E. of London. Market on Thursday.

SOW, (the *ow* is pron. as in *now*) *s.* a female pig or hog. An oblong mass, applied to lead.

To SOW, (*sō*) *v. a.* part. pass. *sown*; [*sawan*, Sax.] to scatter seed on the ground for growth. Figuratively, to spread or propagate. To besprinkle.

SPA'CIOUSNESS, *s.* roominess; wide extension.

SPADE, *s.* [*spad*, Sax. *spade*, Isl. and Belg.] a broad shovel used in digging. A deer three years old. In cards, wherein the four suits represent the four states in a kingdom, the nobility were represented by the ends of lances or spikes. The Spaniards, however, represent them by the *espadas*, i. e. swords instead of spikes, and our ignorance of the design of the inventor, as well as of the Spanish language, has occasioned our representing the points of this suit broader, and calling them by the name of *spades*.

SPADILLE, *s.* [Fr.] at ombre and quadrille, the ace of spades.

SPA'GYRIST, *s.* [coined by Paracelsus, from *spaher*, a searcher, Teut.] a chymist. Adjectively, chymical.

SPAIN, a considerable kingdom of Europe, bounded on the N. by the Bay of Biscay; on the N. E. by the Pyrenean mountains, which separate it from France; and on the E. S. and S. E. by the Mediterranean, and the Straits of Gibraltar; on the S. W. by the Atlantic; and on the W. by Portugal and the Atlantic. It is about 700 miles in length, and 500 in breadth. It contains the provinces of Old and New Castile, Andalusia, Arragon, Estramadura, Galicia, Leon, Catalonia, Granada, Valencia, Biscay, the Asturias, Murcia, and Upper Navarre; some of which have been separate kingdoms. The air of Spain is dry and serene, except during the equinoctial rains, but excessively hot in the southern provinces, in summer. The vast mountains, however, that run through Spain, are very beneficial to the inhabitants, by the refreshing breezes that come from them in the southernmost parts, though those in the N. and N. E. are in the winter extremely cold. The soil is very fertile; but there are large tracts of uncultivated ground. The produce of the country is fine wheat, barley, saffron, exquisite honey, silk, saltpetre, salt, barillas, (a species of pot-ash) and even sugar-canes. It produces the richest and most delicious fruits that are to be found in France and Italy; oranges, lemons, prunes, citrons, almonds, raisins, figs, dates, pomegranates, olives, &c. Their wines are deservedly in high esteem. Wolves are the chief beasts of prey that infest Spain. The wild bulls, which are caught in Andalusia, have so much ferocity, that their bull fights were formerly the most magnificent spectacle the court of Spain could exhibit; this barbarous amusement, however, is now, in part, exploded. Their domestic animals are horses that are remarkably swift, mules, horned cattle, (which are but few,) sheep, &c. The wool of the latter is superior to any in Europe; the best is that of Old Castile. In Biscay, there are little hogs, which the ladies are so fond of, that they carry them about like lap-dogs. Spain abounds in minerals and metals, cornelian, agate, jacinth, loadstones, turquois-stones, quicksilver, copper, lead, sulphur, alum, calamine, crystal, marbles of several kinds, porphyry, the finest jasper; and even diamonds, emeralds, and amethysts are found here. Antiently it was celebrated for gold and silver mines, but since the discovery of America at least, no attention has been paid to them. The principal rivers are the Douro, Tajo, Guadiana, Guadalquiver, Ebro, Gualdalaviar, and Segura. Spain, which in the times of the Goths and Moors, contained between 20 and 30 millions of people, is now but thinly inhabited; to which various causes have contributed, as, the expulsion of the Moors, the emigrations to the colonies, the vast numbers and celibacy of the clergy, and the indolence of the natives. It is is supposed to contain, at present, about 7,500,000 inhabitants. The greatest part of the necessary artisans are French, as the natives disdain to stoop to handicraft trades. The persons of the Spaniards in general are tall, their complexions swarthy, and their countenances expressive. The women

are small and slender, and, in general, possess little of that beauty which reigns in their novels and romances. The established religion of Spain is popery, and here the inquisition (first commenced in 1477) once reigned in all its horrors. Spain has 44 episcopal sees, and 24 universities. It was once the most free, but is now one of the most despotic kingdoms in Europe. They had once their cortes, or parliaments, which had great privileges; but though not absolutely abolished, they have little or no part in the government. Besides the king's territories in Europe, he possesses the best part of America, and is master of many rich islands in the South Seas; and particularly the Philippines, from whence they import the rich merchandises of the East Indies. He also possesses several places in Africa, particularly Ceuta and Oran. The heir to the crown is always called Prince of Asturias. Madrid is the capital.—A surprising revolution, however, has lately taken place in this country, effected by the interference of the French Emperor, who has placed his brother Joseph Buonaparte on the throne of the antient royal family of Spain. For an account of the events of the war occasioned by this usurpation, the reader is desired to consult the chronology at the end of this work, from the year 1807.

SPALDING, a neat populous town of Holland, in Lincolnshire, chiefly surrounded by gardeners' grounds. From its neatness, and the canals in the streets, it resembles a Dutch town, and vessels of 50 or 60 tons, carrying coals, corn, &c. come up here with the tide. Much hemp and flax is grown in the neighbourhood. It is seated on the river Welland, 20 miles N. by E. by Peterborough, and 94 N. of London. Market on Tuesday. See HOLLAND.

STAR, *s.* [*steorra*, Sax. *sterre*, Belg.] a general name for all heavenly bodies, which, like so many brilliant studs, are dispersed through the whole heavens. The stars are distinguished, from the phœnomena of their motions, &c. into fixed and erratic or wandering stars; these last are again distinguished into the greater luminaries, viz. the sun and moon; the planets or wandering stars, properly so called; and the comets. As to the fixed stars, or simply stars, they are so called because they seem to be fixed, or perfectly at rest, and consequently appear always at the same distance from each other. Various have been the conjectures concerning the nature of the fixed stars: but that which supposes them to be suns enlightening other worlds appears to be the best founded, from the following considerations: That they are at immense distances from our earth is evident from their almost insensible parallax, which is too minute to be accurately ascertained, amounting to no more than a very few seconds; whence the distance of the nearest, by trigonometry, is found to be, at the least, some hundreds of times farther removed from us than Saturn. That their respective magnitudes are amazingly great is demonstrable from their being visible at such a vast distance; and that they shine by their own, and not a borrowed light, is manifest from their great lustre at such an immense distance from our luminary of day: for if you compare the faint light of Saturn with the brilliancy of Sirius, (which is a great number of times more distant from the sun than the former,) we shall be convinced that our sun is not the source of light to the latter. Their apparent diameters are not as great as was formerly thought, being found not to exceed a second of a degree; which may be easily proved from their almost instantaneous disappearance behind the disk of the moon at the time of an occultation, their whole body emerging in less than two seconds, whereas the moon employs that time in moving over 1″ of a degree. Their re-appearance from behind the moon has also been observed to be equally quick. Now, to suppose a star, of not more than a second in its visible diameter, (yet by its radiancy appearing to the naked eye much larger,) to be illuminated by the sun, when removed at such an amazing distance from him, is the greatest absurdity. *Falling Stars* in meteorology, are fiery meteors, which dart through the sky in form of stars; being occasioned by a nitro-sulphureous matter, the common cause of all such meteors. Also, the pole-star. A mark. An asterisk used by printers. In heraldry, it is a charge frequently borne on the shield, and the honourable ordinaries, in figure of a star. It is also a badge of honour worn by the Knights of the Garter, Bath, and Thistle.

STEP, in composition, signifies one related to another only by marriage; from *steop*, Sax. of *stepan*, Sax. to deprive, or make an orphan; hence we meet with the words *step-daughter*, or *step-son*, as well as *step-mother*; that is, a daughter or son that are orphans, or have lost their own mother; and a person who by marriage is the mother of another that was an orphan, or had lost his or her mother by death.

STEPHEN, earl of Bulloign, son to the earl of Blois, by Adela, the Conqueror's fourth daughter, though he had taken the oath of allegiance to Maud, daughter of Henry I. in case he died without male issue, found means to supplant her, and to get the crown placed upon his own head. As he lived with the king his uncle in England, his good qualities gained him his affection to a high degree; so that he took pleasure in heaping favours on him, never imagining that he would attempt to set himself up in prejudice of his daughter. However, after prince William's death, Stephen, by the assistance of his brother Henry, bishop of Winchester, began to take measures to secure the crown to himself, but so secretly, that the king his uncle suspected nothing of the design. Being in Normandy with king Henry in his last illness, as soon as the king was dead he came over himself to forward his project by his presence. The bishop of Winchester had already gained over the archbishop of Canterbury and the bishop of Salisbury; and these three prelates had influence enough over all the rest of the clergy to bring them to declare for Stephen. This did the business, and so much the easier, as Maud was out of the kingdom; and such of the barons as were not of Stephen's party, seeing the bent of the clergy, durst not oppose the design. And so Stephen was declared king, and crowned 24 days after Henry's death, being 31 years old, 1135: and the bishops and nobles did not stick to break the oath they had thrice taken to Maud. In order to gain this important point, Stephen had been obliged to promise great things to the clergy and people, and that he would grant them more privileges

than ever they enjoyed under the Norman kings. And as he was not without his fears from Maud and Geoffrey her husband, to secure the affections of his subjects, he, soon after his coronation, convened a general assembly at Oxford, in which he signed a charter, acknowledging his being elected king by the clergy and people; confirming all the liberties, privileges, and immunities of the church, and consenting that all ecclesiastical causes and persons should be tried by the clergy; promising not to meddle in any manner with the temporalities of vacant bishopries, or estates belonging to ecclesiastics; abolishing all the game laws enacted since the conquest, and all the forest laws; and reviving the antient Saxon laws. He moreover abolished Danegelt, which had been taken away by Edward the Confessor, but restored by the Norman kings. The king, to humour the barons, and thinking thereby to be the better secured from any attempts of the empress Maud, or any foreign invaders, permitted them to fortify their castles, and to build others upon their estates; so that in a little time there were above 1000 fortified castles in the kingdom. Stephen began his reign in peace; but the fair scene was soon changed to a most furious and bloody civil war, which overspread all parts of the nation, and continued almost through his whole reign. In 1137, the Welsh made an irruption on the frontiers, and carried off a considerable booty; and in a battle near Cardigan, the king's troops were beaten, and above 3000 slain on the spot. At the same time David, king of Scotland, invaded the northern counties of England, took Carlisle and Newcastle, and advanced as far as Durham. Stephen marched against him with a very numerous army; but this war was soon ended in a treaty of peace. It broke out again, indeed, more than once, the Scotch king taking advantage of the confusion in England to renew his incursion; but being defeated in a great battle by Thurstan, archbishop of York, and king Stephen, after having reduced his rebellious barons, marching into the North to chastise that monarch for his late insult, David, not caring to run the hazard of another battle, sued for peace; and Stephen thought fit to agree to it. Robert, earl of Gloucester, natural brother to the empress, was at the head of the discontented barons who revolted, because the king had not rewarded them as they thought they deserved for placing him on the throne. The earl, thinking matters ripe, went over to acquaint the empress, and wrote an abusive letter to Stephen, upbraiding him for the breach of his oath to Maud, and for drawing him into the same crime. To this he added a manifesto, wherein he treated the king as an usurper, and declared war against him. Stephen, without returning him any answer, confiscated his estate. The empress's party gained ground exceedingly; the earl of Gloucester came over, and got possession of Bristol, and the revolt of the barons was like to have been general; so that Maud was invited over, whom they promised to own as their sovereign. But Stephen supported himself with such undaunted courage and resolution, that he crushed this dangerous insurrection for the present, and the earl of Gloucester had no other way to take but to go and press the empress to come over, in order to put new life into her party. The bishops, knowing how much the king was obliged to them for his crown, extended their power to such a degree, amassed such immense wealth, and became so excessively proud and haughty, that the king grew jealous of them, and resolved, but impoliticly, considering his situation, to humble them, and took vigorous methods for that purpose, seizing the castles and treasures of several who had rendered themselves most obnoxious. This brought almost the whole clergy upon his back; and even his brother the bishop of Winchester turned against him, under pretence of standing up for the rights of the church. By this means a storm was raised, which, with some intermission, continued for several years. For the clergy's faction became so strong, that most of the lay lords came over to them, and the people generally every where deserted the king, and declared for the empress; so that none stuck to him but only a few of the barons, his foreign favourites, and his army of Flemings, Bretons, &c. which served him faithfully, though they were but ill paid. At this favourable juncture the empress Maud, with her brother the earl of Gloucester, came over in the year 1139, from which time a cruel civil war ensued. King Stephen, in the midst of all, behaved with the greatest resolution, intrepidity, firmness, and constancy of mind, by which means he at least weathered the raging storm; but not without being first brought as low as it is possible to conceive a sovereign prince to be. For after several other sieges, in 1140, the earl of Gloucester came so suddenly upon him, as he was besieging Lincoln, that a battle could not be avoided. Both sides fought with equal bravery for some time, but at last the royal army was totally routed and put to flight. The king was left almost alone, and on foot, in the field of battle, and defended himself with amazing valour even to the last extremity. His battle-axe was broke by the force of his blows, and afterwards his sword, scarce any thing but the hilt remaining in his hand; when he was knocked down on his knees with a stone, and a knight ran in, seized him by the helmet, and presented his sword to his throat, threatening to kill him if he would not surrender; which he still refused to do to any but the earl of Gloucester, who conducting him to the empress, she ordered him to be confined in Bristol castle, where, after he had been some time, he was even laid in irons. Never did any one bid fairer for the crown than the empress Maud did at this time. All England deserted the imprisoned king, except London and the county of Kent, where he had still some friends, by the means of the queen his spouse, Eustace, his son, and William d'Ypres his favourite. The earl of Anjou at the same time got Normandy to acknowledge Maud for their sovereign. Thus Stephen's affairs seemed every where desperate; and the more so, as the empress, by promising the bishop of Winchester, then legate, the disposal of all church preferments, had gained him over to her party, who a little before had turned against her, and espoused the interest of the king his brother. But now this treacherous prelate having called a council at Winchester, by his private intrigues with the clergy, got them to choose Maud for their queen, and proceeded so far as to excommunicate all who adhered to the king. The Londoners at least giving way to the times, thought it expedient to declare for the empress, and preparations were even making for her coronation. But her haughty, imperious, and disobliging temper, with which she treated persons of all ranks, soon undid all again. She refused the Londoners the only thing they petitioned for, and which her father had promised, viz. to revive the laws of king Edward; which impolitic conduct drew upon her the ill-will of the citizens. She even disobliged the bishop of Winchester, by haughtily denying his request to confirm to his nephew Eustace the titles of earl of Mortagne and Boulogne. The consequence was, that he became her utter enemy, and as he had set her up, resolved now to use his utmost efforts to pull her down. He first by his emissaries got the Londoners to declare against her, and even brought them into a plot to seize her person, which she narrowly escaped, and leaving the city in a great fright, put herself at the head of her troops, attended by the earl of Gloucester, and marched to Winchester in order to seize the legate, but in vain. He slipt out at a gate on the other side of the town, and went and drew his friends together. The Kentish men having joined the Londoners, Stephen's queen, prince Eustace, and William d'Ypres, headed them, and marched with all expedition to Winchester, where the empress had scarce time to get into the castle. Here she was besieged, but found means to march out with her troops, which were closely pursued by the king's, whilst the rest of the army was advancing to surround them. In the pursuit, the earl of Gloucester, intent on saving the empress, was himself taken prisoner, and conducted to Rochester. This procured king Stephen his liberty; for Maud, who had a great affection for the earl her brother, and could not well do without him, was obliged to exchange him for the king. Soon after the legate called a council at Westminster, where he excommu-

nicated all Maud's adherents, as before he had those of the king his brother. Thus Stephen regained his liberty, 1141. But the war between him and Maud continued for several years, during which the empress's affairs visibly declined; till at last the brave earl of Gloucester being dead, she despairing of standing her ground much longer, about the year 1147 retired to Normandy, and left Stephen once more master of the whole kingdom. He then endeavoured to secure the crown after his death to his son Eustace, and even to get him crowned beforehand, but did not succeed in the attempt. After the departure of Maud, king Stephen was contriving how to repair the mischiefs the kingdom had suffered by so long a war. But he soon found a new rival in prince Henry, the eldest son of Maud, who was 16 years old, and of an enterprising genius. Having prepared matters, he landed in England with a considerable force, in 1152, and was immediately joined by several barons, who put into his hands 30 fortified castles. And now a second civil war, as furious as the first, was like to break out, and the two armies were just upon the point of engaging; when by the good offices of some of the nobility on each side, in a conference between the king and Henry on the opposite banks of the river Thames, near Wallingford, a truce was agreed upon; which being several times renewed, at last ended in a treaty of peace, (which was facilitated by prince Eustace's death,) by which Stephen was to enjoy the crown during life, and after his death Henry was to succeed him as his lawful heir. Soon after, Stephen performed the ceremony of adopting the young prince. Thus peace was restored, to the universal joy of the nation, and Stephen again applied himself to repair the miseries the war had occasioned; but death put a stop to his generous designs, which took him out of the world eleven months after the treaty with Henry, viz. on October 25th, 1154, in the 50th year of his age, and 19th of his reign. He was buried in the abbey of Feversham, which he had founded, near queen Maud his wife, only daughter and heir to the earl of Boulogne, and Eustace his son, who both died 1153. Stephen was a prince of great courage, fortitude, and activity; and might have reigned with the approbation of his people, had he not been harassed by the efforts of a powerful competitor, which obliged him to take such measures for his safety as were inconsistent with the dictates of honour, which indeed his ambition prompted him to forego in his first endeavours to ascend the throne. His necessities afterwards compelled him to infringe the charter of privileges he granted at his accession; and he was instigated by his jealousy and resentment, to commit the most flagrant outrages against gratitude and sound policy. His vices as a king seem to have been the effects of the troubles in which he was involved; for, as a man, he was brave, open, and liberal, and during the short calm that succeeded the tempests of his reign, he made a progress through the kingdom, published an edict to restrain all rapine and violence, and disbanded the foreign mercenaries who had preyed so long upon his people. But his character has been roughly handled, on account of the little regard he expressed for the clergy, and his usurpation of the throne from the immediate heir of blood.

STIRIA, a province of Germany, in the circle of Austria, with the title of a duchy. It is bounded on the N. by the archduchy of Austria; on the E. by Hungary; on the S. by Carniola; and on the W. by Carinthia, and the archbishopric of Saltzburg; being 125 miles in length, and 17 in breadth. It is said to contain 22 cities, 95 towns, 338 castles, 15 convents, and 200,000 inhabitants. Though it is a mountainous country, yet there is a great deal of land fit for tillage, and the soil is so good that the inhabitants never are in want of corn. It contains mines of very good iron, whence the arms made here are in great esteem. The women differ greatly from the Austrians, and are very plain and downright. They have all swellings on their throats, called bronchoceles. The men are also very simple, and are very zealous worshippers of the Virgin Mary. They delight to sit at home, in the chimney corner, never troubling their heads about foreign affairs. The chief town is Gratz.

STIRIOUS, *a.* [from *stiria*, an icicle, Lat.] hanging in drops like icicles.

STIRLING, an antient town of Scotland, the capital of Stirlingshire. It is seated on the S. side of the Frith of Forth, on a hill, which, rising from the E. terminates abruptly in a steep rock. On this rock is an antient castle, which was often the residence of the kings of Scotland. The outside of the palace, which is now converted into barracks, is richly and curiously adorned with various grotesque figures. From the castle is a fine view of the windings of the Forth, which are so numerous, that the distance from Stirling to Alloa is above 20 miles by water, although only four by land. The church of Stirling is a magnificent Gothic structure, which serves for two separate places of worship. In this town and its neighbourhood are flourishing manufactures of carpets, as also of coarse shalloons and cottons; but that of tartans is on the decline. Stirling is commodiously seated, being a pass between the N. and S. parts of Scotland, but with such a difficult navigation of its river that only small vessels can come up to the town. It is 30 miles N. W. of Edinburgh.

STIRLINGSHIRE, a county of Scotland, bounded on the N. and N. E. by Perthshire and Clackmannanshire, on the E. by the Frith of Forth, and the county of Linlithgow, on the S. by Lanerkshire, and on the W. by Dumbartonshire. It is about 36 miles in length, 8 or 9 in its general breadth, and not more than 13 in its greatest. The S. parts are

mountainous, but the parts about the Forth are fertile, and abound in coals. The principal rivers are the Forth, (which receives a great number of smaller streams) Carron, and Avon; besides which, the new canal from Glasgow runs through this county to the Carron mouth. The principal towns are Stirling and Falkirk.

STIRRER, *s.* one who is in motion; one who puts in motion; an instigator. A stirrer up, an inciter.

STIRRUP, *s.* [*stirap*, or *stigerap*, Sax.] an iron hoop hung, by a strap, assisting an horseman in mounting his horse, and in sitting on the saddle.

STO'CKHOLM, the capital of Sweden, in a situation remarkable for its romantic scenery. It is very long and irregular, being built on seven small rocky islands, from one of which the city takes its name, (between the Baltic and the Malar lake) besides which, it contains two peninsulas. Between these several parts of the city a communication is formed by means of bridges. A variety of contrasted and beautiful views are formed by numerous rocks of granite, rising boldly from the surface of the water, partly bare and craggy, and partly dotted with houses, or feathered with wood. The harbour is an inlet of the Baltic; the water, of a blackish colour, is of such depth, that ships of the largest burden can approach the quay. At the extremity of the harbour, several streets rise one above another, in the form of an amphitheatre; and the palace, a magnificent building, crowns the summit. The arsenal contains many curiosities, among which are an immense number of standards, and other military trophies, taken from the Imperialists, Poles, Russians, and Danes. Except in the suburbs, where some houses are of wood, painted red, the buildings are mostly of stone, or brick, stuccoed white, and built on piles. A royal Academy of Sciences was instituted here in 1741; here is also a Royal Academy of Painting and Sculpture. In Stockholm are manufactures of glass, china, woollen, silk, linen, &c. The inhabitants are estimated at 60,000. The court formerly resided at Upsal, but removed here in the last century. It is 200 miles N. E. of Copenhagen, 625 N. W. of Vienna, 625 W. of Moscow, 750 N. E. of Paris, 900 N. E. of London, and 1200 N. W. of Constantinople. Lon. 19. 80. E. lat. 59. 20. N.

STRUT, *s.* a gait or walk of affected grandeur.

STUART, (CHARLES.) See CHARLES I. Charles I. was a prince of a middling stature, robust, and well proportioned. His hair was of a dark colour, his forehead high, his complexion pale, his visage long, and his aspect melancholy. He excelled in riding, and other manly exercises; he inherited a good understanding from nature, and had cultivated it with great assiduity. His perception was clear and acute, his judgment solid and decisive: he possessed a refined taste for the liberal arts, and was a munificent patron to those who excelled in painting, sculpture, music, and architecture. In his private morals, he was altogether unblemished and exemplary. Charles, by his queen Henrietta, daughter of Henry IV. of France, had four sons and five daughters; namely, Charles James, who died in the cradle; Charles, Prince of Wales, by whom he was succeeded; James, Duke of York; Henry, Duke of Gloucester, who died after the Restoration; Mary, who espoused William of Nassau, Prince of Orange, by whom she was left a widow; Elizabeth, confined by the regicides in Carisbrook Castle, where she died of grief; Anne and Catharine, who died in their infancy; and Henrietta Maria, who was carried in her infancy by the Countess of Dalkeith into France, where she married Philip, Duke of Anjou and Orleans, brother to Louis XIV. During the peaceable period of this reign, the commerce of England

increased considerably to the East Indies, Guinea, Spain, and Turkey. The colony of New England became populous; for great numbers of Puritans fled thither, in consequence of being severely treated by Laud and the high-church party. The Catholics afterwards, in order to avoid the same kind of persecution from the Puritans, resorted to America, and settled in the colony of Maryland.

STUART, (CHARLES.) See CHARLES II. Charles II. was in his person tall and swarthy, and his countenance marked with strong harsh lineaments. His penetration was deep, his judgment clear, his understanding extensive, his conversation lively and entertaining, and he possessed the talent of wit and ridicule. He was easy of access, polite, and affable; yet these good qualities were more than overbalanced by his weakness and defects. He was a scoffer at religion, and a libertine in morals; careless, indolent, profuse, abandoned to effeminate pleasure, incapable of any noble enterprise, a stranger to manly friendship and gratitude, deaf to the voice of honour, blind to the allurements of glory, and, in a word, wholly destitute of every active virtue. Being himself unprincipled, he believed mankind were false, perfidious, and interested; and therefore he practised dissimulation for his own convenience. He was strongly attached to the French manners, government, and monarch; and was dissatisfied with his own limited prerogative. The majority of his own subjects he despised or hated, as hypocrites, fanatics, and republicans, who had persecuted his father and himself, and sought the destruction of the monarchy. In these sentiments he could not be supposed to pursue the interest of the nation; on the contrary, he seemed to think that his own safety was incompatible with the honour and advantage of his people. Trade and manufactures, however, flourished more in this reign than at any other æra of the English monarchy. Industry was crowned with success, and the people in general lived in ease and affluence. In the reign of Charles II. the arts and sciences were cultivated with good success, though they were very little encouraged by the sovereign. In this period flourished the immortal Newton, whose discoveries in nature will reflect eternal lustre on the nation that gave him birth; the learned Stillingfleet; the elegant, the rational Tillotson; besides many other excellent divines, such as Tennison, Patrick, Lloyd, and Burnet, who distinguished himself by his History of the Reformation. The practice of medicine was greatly improved by the judicious Sydenham. The witty doggrelist Butler, contributed more than any other person, by his poem of Hudibras, to bring fanaticism into contempt. The king admired this production, yet left the author to die in obscurity. Dryden shone unrivalled in poetry; but was vicious and incorrect, from the depravity of the public taste, and the hurry in which he was obliged to write for subsistence. Otway's tragedies are celebrated above all others, for warmth and pathetic tenderness. He lived utterly neglected, and died of hunger. Even the courtiers of this reign were inspired with literary ambition. The duke of Buckingham acquired some reputation by writing the Rehearsal, to ridicule the false taste and absurdities of the dramatic writers. Rochester rendered himself famous for poignancy of satire and impurity. Wycherly displayed the genius of true comedy, though rude and licentious. The earls of Dorset, Roscommon, and Mulgrave, wrote with ease, spirit, and negligence. Halifax possessed refined talents. The writings of Sir William Temple are entertaining and instructive.

STUART, (ANNE.) See ANNE. Anne Stuart, queen of Great Britain, was in her person of the middle size, well proportioned. Her hair was of a dark brown colour, her complexion ruddy, her features were regular, her countenance was rather round than oval, and her aspect more comely than majestic. Her voice was clear and melodious, and her presence engaging. Her capacity was naturally good, but not much cultivated by learning; nor did she exhibit any marks of extraordinary genius, or personal ambition. She was a pattern of conjugal affection and fidelity, a tender mother, a warm friend, an indulgent mistress, a munificent patron a mild and merciful princess, during whose reign no subject's blood was shed for treason. She was zealously attached to the church of England, from conviction rather than from prepossession, unaffectedly pious, just, charitable, and compassionate. She felt a mother's fondness for her people, by whom she was universally beloved with a warmth of affection, which even the prejudice of party could not abate. In a word, if she were not the greatest, she was certainly one of the best and most unblemished sovereigns that ever sat upon the throne of England.

SUN, *s.* [*sunno*, Goth. *sunna* or *sunne*, Sax. *son*, Belg.] in the Newtonian astronomy, is that bright luminary in the centre of our system which is the source of light and heat to all the planets, satellites, and comets, belonging thereto. His magnitude is immensely great, being (according to the best computation) not less than 883,000 miles in diameter: and, consequently, more than a million of times larger than our globe; a bulk so prodigious, that if all the planets and satellites of our system were united in one, it would scarcely make a globe of the 400th part of his solid contents. Though he appears to the naked eye so extremely bright and splendid, yet, when viewed through a telescope, he is seen with dark spots on his surface, which are changeable, and often vary their figure; and sometimes they are so large that they may be seen by the naked eye, with the interposition only of a smoked glass. They move from west to east, from which his rotation round his axis has been discovered to be performed in 25d. 14h. His apparent diameter varies from 32′ 39″ to 31′ 33″ according as the earth is in perihelio or aphelio at the time.—There is great variety in the magnitude of the solar spots; the difference is chiefly in superficial extent of length and breadth; their depth or thickness is very small: some have been so large, as by computation to be capable of covering the continents of Asia and Africa; nay, the whole surface of the earth, or even five times its surface. The number of spots on the sun is very uncertain; sometimes there are a great many, sometimes very few, and sometimes none at all. Scheiner made observations on the sun from 1611 to 1629; and says he never found his disk free from spots, excepting a few days in December, 1624. At other times he frequently saw 20, 30, and in 1625, he was able to count 40 spots on the sun at a time. In an interval afterwards of 20 years, from 1650 to 1670, scarce any spots were to be seen; and after that time some years have furnished a great number of spots, and others none at all. From these phœnomena it is evident that the spots are not endowed with any permanency. Hevelius observed one that arose and vanished in 16 or 17 hours; nor has any been observed to continue longer than 70 days, which was the duration of one in 1676. Those spots that are formed gradually, are gradually dissolved; while those that arise suddenly, are for the most part suddenly dissolved. When a spot disappears, that part where it was generally becomes brighter than the rest of the sun, and continues so for several days; on the other hand,

those bright parts (called *faculæ*, as the others are called *maculæ*) sometimes turn to spots.

SU'NDERLAND, a seaport in the county of Durham, seated at the mouth of the river Wear, where it empties itself into the German Ocean, it is a populous, thriving, well-built town. Its inhabitants are estimated at 30,000. Coal is the staple commodity, of which 280,000 chaldrons, Newcastle measure, are exported annually. In one year, (1791) 4905 vessels cleared coastways, and 703 oversea, in all 5608. Glass, bottles, lime, salt, grindstones, coperas, and pottery-ware, are also exported. It has a handsome church a large and elegant chapel of ease, a neat and large chapel for the Methodists, five Dissenters' meeting houses, an hospital for old seamen or their widows, another for eight poor women, a dispensary, and other public buildings. For a long time the navigation of this port was considerably impeded, from the want of a sufficient depth of water, to admit ships of any considerable burden to put to sea with their whole lading; to remedy which, such vessels were obliged to take part of their cargo in the open road; by which the keel-men, who bring down the coals, were often exposed, in sudden storms, to danger, by venturing out to sea with the remainder of their lading; to obviate which inconvenience, and the danger to which the vessels are there often exposed, many of the largest ships belonging to this port were obliged to take in their lading at Shields: But this inconvenience is now very much remedied, by recent improvements in the harbour, and particularly the addition of a north pier, by which the ebbing tide gains greater force to scour the sand which forms a bar at the entrance of the harbour; the tide now flows 16 feet, and admits vessels of 300 and 400 tons burden. A bridge, has been lately erected across the river Wear, and is thought to be the greatest curiosity of its kind in the world. It is not less remarkable for its prodigious height and extreme span, than for the peculiarity of its construction, being formed of small segments of cast iron, joined in such a manner as to form a complete arch, the span of which is 236 feet, and will admit of vessels sailing under it of 400 tons burden, by only striking their top-gallant masts. The inhabitants, whose subsistence depends entirely upon the coal trade, particularly the *casters*, who are employed in loading the ships, are often exposed to great vicissitude, especially in severe winters, when most of the ships are laid up, or when the river is frozen over, and navigation consequently interrupted. But it is observable, that the keel-men of this port have a comfortable appearance, and are, in general, an athletic, healthy, decent body of men. It is 13 miles N. E. of Durham, and 264 N. by W. of London. Market on Friday.

SU'NDEW, *s.* in botany, the drosera of Linnæus. This genus contains five stamina and five pistilla within the blossom. SURAT, a seaport of the Decean of Hindoostan, said to have 200,000 inhabitants. Its trade is now very considerable; and in this city are as many different professions of religion as in Amsterdam; for besides Jews and Christians, there are Mahometans of several sects, and many sorts of Gentoos. The surrounding country is fertile, except towards the sea, which is sandy and barren. Before the English East India Company obtained possession of Bombay, the presidency of their affairs on the coast of Malabar, was held at Surat; and they had a factory established there. Even after the presidency was transferred to Bombay, the factory was continued. The Great Mogul had then an officer here, who was stiled his admiral, and received a revenue called the tanka, of the annual value of three lacks of rupees, arising from the rents of adjacent lands, and the taxes levied at Surat. The East India Company in 1759, fitted out an armament, which dispossessed the admiral of the castle; and, soon after, the possession of this castle was confirmed to them by the court of Delhi. They obtained, moreover, the appointment to the post of admiral, and were constituted receivers of the tanka by which their authority in this place became supreme. Surat is situated on the confines of Guzerat, about 20 miles up the river Tapty, and 177 N. of Bombay.

SU'RRY, a county of England, bounded on the N. by Middlesex and a point of Buckinghamshire, on the E. by Kent, on the S. by Sussex, and on the W. by Hampshire and Berks. Its greatest length is about 39 miles, and its breadth 26. It is divided into 13 hundreds, which contain 11 market towns (including Southwark) 140 parishes, 650 villages and hamlets, and about 35,000 houses. It is a healthy, pleasant country, and the value of estates in it has advanced of late years beyond any other part of England. The soil is very different in the extreme parts from that in the middle; whence it has been compared to a coarse cloth with a fine border: for the edge of the county on all sides has a rich soil, extremely fruitful in corn and grass, particularly in Holmesdale, and on the N. and W. parts toward the Thames; but it is far otherwise in the heart of the county, where are wide tracts of sandy ground and barren heath, and in some places are long ridges of hills, with warrens of rabbits, and parks for deer. This county produces corn, box-wood, walnuts, hops, and fuller's earth; and near Darking grows a wild black cherry, of which a very pleasant

wine is made, little inferior to French claret. The manufactures in starch, tobacco, gunpowder, paper, vinegar, calico printing, wax bleaching, &c. are considerable. The principal rivers besides the Thames (which is the boundary of this county on the N.) are the Mole, Wey, Wandle, and Loddon. The Lent assizes are held at Kingston, and the summer assizes at Guildford and Croydon alternately.

To engross, used with *up*. SYNON. *Swallow* and *gulp* are more nearly synonymous in the literal than the figurative sense; yet, even in that, they will admit of some distinction. We *gulp*, in order to *swallow*. This, however, is not the only difference. By *swallowing*, we understand taking down the throat simply; by *gulping*, we mean sucking down eagerly, or without intermission. —With respect to eating, *swallowing* carries in its idea the act of *chewing*; *gulping* does not.—In the figurative sense, *gulping* rather implies a difficulty in *swallowing*.

SWE'DEN, a large kingdom in the N. part of Europe; bounded on the N. by Danish Lapland, and the ocean; on the S. by the Baltic sea, and the Gulf of Finland; and on the W. by Norway, the Sound, and the Categate; being about 800 miles in length, from N. to S. and 350 in breadth from E. to W. It is divided into Proper Sweden, Gothland, Northland, Finland, and Lapland. It was antiently called Scandinavia, or at least it is part of the country of that name. We may easily conceive that the climate is not every where the same; for on the side of Muscovy, the longest day is 18 hours, 36 minutes; but farther towards the N. and near the Pole, there is continual day and continual night for several weeks successively. In the province in which Stockholm is seated, the spring and autumn is scarce to be perceived, for the winter continues 9 months, and the summer during the remaining three. In winter the cold is excessive, and in summer the heat is almost insupportable, the air being serene at that time. Notwithstanding this the Swedes live a long while; and it is not uncommon to see ten people at the same table, whose ages make up 1000 years. Those places that are fit for cultivation have scarce a foot of good earth; for below it is all gravel; for which reason they till the ground with a single ox, and one servant may readily manage the plough. All their rocks are quite covered with flowers in the summer time, and their gardens have plenty of fruits. The trees are early in blossoming, because the soil is fat and sulphureous, which contributes greatly to the vegetation of plants; but yet the apples, pears, cherries, apricots, melons, and grapes, have not so good a taste as in the more southern countries. Their domestic animals are horses, cows, hogs, goats, sheep. With regard to the wild beasts, there are bears, wolves, foxes, wild cats, and squirrels. There

are also elks and rein deer. They have plenty of partridges, woodcocks, falcons, &c. The silver mines are 200 yards in depth; and though they are rich, yet the people who work them have scarce wherewith to subsist, when the king's duties are paid. The mines of copper are exceedingly good, though not so productive as formerly; likewise the iron mines yield a great deal of iron. The merchandises, which the Swedes supply foreigners with, are boards, gunpowder, leather, iron, copper, tallow, skins, pitch, rosin, masts, and all sorts of wooden utensils; and on the contrary, they are obliged to purchase salt, brandy, wine, linen cloth, stuffs, tobacco, sugar, spice, and paper. The inhabitants are of a robust constitution, and able to sustain the hardest labour. They are much more polished than what they were; and have several public schools and colleges, where arts and sciences are taught. Their houses are generally of wood, with very little art in their construction. The roofs are covered with turf on which their goats often feed. There is no country in the world where the women do so much work; for they till the ground, thrash the corn, and row the boats on the sea. Sweden was formerly an elective monarchy, and afterwards the most limited one in Europe, till August 21, 1772, when, by a very extraordinary revolution, the late king gained the most essential royal prerogatives, without, however, being an absolute monarch. This prince was assassinated March 16, 1792, leaving his son Gustavus heir, and his brother, the duke of Sudermania regent of the kingdom: but early in 1809 Gustavus was deposed, and the duke of Sudermania chosen king on the 5th of June following. However, the succession has now devolved on a Frenchman! Bernadotte, prince of Ponte Corvo, having been chosen crown prince by the diet, on June 26, 1810, in the room of Augustenbe g, who died suddenly while reviewing his troops. The inhabitants are computed at 3,000,000. The established religion is the Lutheran, and it is said they will not tolerate any other in the kingdom. They have 1 archbishop, and 7 bishops, besides 6 superintendants. The capital is Stockholm.

SWITZERLAND, or SWISSERLAND, a large country of Europe; bounded on the E. by the Tyrol, on the W. by the Franche Compte; on the N. by Suntgaw, the Black Forest, and a part of Suabia; and on the S. by Savoy, the Milanese, and the late Venetian provinces of Bergamasco and Bresciano. It is about 225 miles in length, and 83 in breadth, and separated from the adjacent countries by high mountains, most of which are covered with snow. There are a great number of lakes and rivers, and some very fertile plains, which plentifully afford the necessaries of life. It is divided into 13 cantons, without comprehending their allies, namely, Lucern, Uri, Schweitz, Underwald, Zug, Friburg, Soleure, which are Catholics. The Protestant cantons are Zurich, Berne, Basle, and Schaffhausen. Glaris and Appenzell contain both religions. About the year 1300, the emperor Albert appointed them an Austrian governor, one Griesler, who, in the wantonness of tyranny, ordered the natives to reverence his hat set upon a pole; which being with a proper spirit refused by one William Tell, a noted marksman with a crossbow, he was sentenced to be hanged, if he did not, at a certain distance, shoot an apple from the head of his own son. Tell hit the apple with one of two short arrows, or bolts, which he had provided; and, being asked what the other was intended for, he answered, "for the tyrant's heart, if I had killed my son." He was ordered to prison, but escaped, and, with some others, brought about a revolution, which produced the several independent states of the Helvetic nation. The mountains of Switzerland, commonly called the Alps, are a long chain of mountains, which begin at the Mediterranean sea, and extend to the Adriatic; and if it were possible for a man to travel from one to the other, his journey would be about 500 miles. The principal lakes are those of Constance, Geneva, Lucern, Zurich, and Neuf Chatel. The most considerable rivers are the Rhine, the Rhone, the Aar, the Rues, and the Inn. The principal riches of Switzerland consist of excellent pastures, in which they breed and fatten their cattle. The inhabitants are all strong robust men, for which reason they have been generally chosen by several nations for the military service. The women are tolerably handsome, have many good qualities, and are generally very industrious. The peasants retain their old manner of dress, and are content to live upon milk, butter, and cheese. The manufactures of Switzerland are considerable in linen, silk, cotton, and woollen, leather, hats, gloves, paper, pottery, clocks, watches, hardware, toys, &c. besides which they export butter, cheese, cattle, sheep, horses, and some wine. The imports are principally grain, hemp, flax, wine, salt, and some manufactures. The inhabitants are estimated at 2,000,000.

T.

THIS the nineteenth letter and fifteenth consonant of our alphabet, the sound whereof is formed by a strong expulsion of the breath through the mouth, upon a sudden drawing back of the tongue from the forepart of the palate, with the lips at the same time open. Its proper sound is that in *tin, tell, rot, put.* When it comes before *i*, followed by a vowel, it is sounded like *s*, as in *nation, motion*, &c. except when preceded by *s*, as in *Christian, question*, &c. When *h* comes after it, it gives a two fold sound; one clear and acute, as in *thin, thief*, &c. the other more obtuse and obscure, as in *then, those, there*, &c. Among the antients, T, as a numeral, stood for 160; and with a dash over it, thus $\bar{T}$, for 160,000. In music, T stands for *tutti*, all together.

TA'RTARY, a country of Asia, which, taken in its utmost limits, reaches from the Eastern Ocean to the Caspian Sea, and from Corea, China, Hindoostan, and Persia, to Russia and Siberia. It is generally considered under three grand divisions; namely, Eastern, Western, and Independent Tartary. The different tribes which inhabit Eastern Tartary were formerly called Mongul Tartars, a warlike nation, who, on one hand, conquered Hindoostan, under Jenghis Khan, and on the other, subdued China in the 13th century, and reigned there for 100 years, till they were expelled in the year 1368. Chinese Tartary (which is separated from China by a great wall about 750 miles in extent) is divided into two parts, Eastern and Western. The greatest part of this country either belongs to the emperor of China, is tributary to him, or is under his protection. The Chinese empire has been lately extended in Tartary, by the celebrated conquest of the kingdom of the Eluths, made in 1759, by the arms of the emperor Kien Long. Independent Tartary includes all the country between Chinese Tartary and the Caspian Sea, and contains Turkestan, Great and Little Bukharia, Turcomania, Charasm, Thibet, and some countries inhabited by the Usbeks and Kalmucks. Western Tartary includes the remainder; most or all of which has been conquered by the Russians. In general, the Tartars are a robust people, have a good constitution, and are capable of undergoing hardships. They have broad faces, short chins, large whiskers, and noses even with their faces. They are dexterous in handling their sabres, and shooting with bows and arrows. The men have no other business than that of going to war, and the women take care of domestic affairs. They are Pagans; and they have a pontiff called Dali Lama.

TA'RTRATES, *s.* in chymistry, salts formed by the combination of any base with the acid of tartar.

TAYLI, or TALI, a city of China, of the first rank, in the province of Yunnan. It is the principal place where they make curious tables, and other ornaments of fine marble, naturally beautified with different colours, in the form of mountains, flowers, trees and rivers. Tayli has under its jurisdiction 4 cities of the second rank and 3 of the third. It is 1205 miles S. W. of Pekin.

TAYTONG, or TAITONG, a city of China, of the first rank, in the province of Chansi, with a very large jurisdiction extending over 4 great cities of the second rank, and 7 of the third. Lapis lazuli is obtained in great plenty here, and there is a kind of jasper which is transparent, and as white as agate. Porphyry, marble, and jasper of all colours are very plentiful, and here is also a great commerce in skins. The neighbouring mountains abound with a variety of simples and medicinal herbs, which the botanists gather with great care. Taytong is very well fortified, according to the manner of the Chinese and has generally a very strong garrison. It is situated in a mountainous country, exposed to the incursions of the Tartars, and surrounded, in a manner, by the great wall, which has forts from place to place, 155 miles W. of Pekin.

TEFFLIS, or TIFFLIS, a town of Asia, in Georgia, one of the seven nations between the Black Sea and the Caspian. It is the capital of that country, the place of residence of its sovereign, and is called by the inhabitants *Thilis-Cabar*, (warm town) from the warm baths in its neighbourhood. Though its circumference does not exceed 2 English miles, it contains 20,000 inhabitants, of which more than half are Armenians; the remainder are principally Georgians, with some Tartars. All the houses are of stone, with flat roofs, which serve, according to the custom of the East, as walks for the women. They are neatly built; the rooms are wainscotted, and the floors spread with carpets. The streets seldom exceed seven feet in breadth; and some are so narrow as scarcely to allow room for a man on horseback: they are consequently very filthy. The Armenians have established in this town all the manufactures carried on by their countrymen in Persia: the most flourishing is that of printed linens. Teflis is seated on the river Kur, at the foot of a mountain, 125 miles W. of Terki. Lat. 41. 59. N. lon. 65. 3. E.

TERPSI'CHORE, (*terpsícorée*) *s.* [Gr,] one of the nine Muses, to whom is attributed the invention of dancing.

TERRA, or the EARTH, *s.* [Lat.] in the Copernican system, is the third planet in order from the sun. It is removed at the immense distance of about 95 millions of miles from that luminary, and revolves round him in 365d. 5h. 48m. 45½s. which is her tropical period; but her sidereal and anomalistic revolutions are, 365d. 6h. 9m. 11s. one-fifth, and 365d. 6h. 15m. 20½s. respectively. Her diameter is about 7964 miles, and circumference 25,020; but, if seen from the Sun, she would appear under an angle of only 17″, as is sufficiently manifest from the two transits of Venus in 1761, and 1769. She turns round her axis in 23h. 56m. 4s. but the natural day or that caused by the sun, is 24 hours at a mean rate. The place of her aphelion, anno 1800, was in 9° 32′ 39″ of Capricorn, having a progressive motion of about 1° 49′ 10″ in 100 years. She has no nodes, her annual path, called the Ecliptic, being the standard by which the deviation of the other planets therefrom are measured. The eccentricity of her orbit is 168 out of 10,000 of those parts into which her distance from the Sun is supposed to be divided; and the equation of her orbit 1° 55′ 52″. She has also a satellite or moon revolving round her; for particulars of which, see MOON.—That the Earth is not at rest in the centre of the universe, as many have imagined, having all the celestial bodies moving round her every day, or thereabouts, may be proved from their vast distance, and also consequent superior magnitude. (See STAR.) The great distance of the Sun from the Earth is so evident, as hardly to need any demonstration; for it is mathematically certain, from the two transits already mentioned, that the parallax of the Sun does not much (if at all) exceed 8s. six-tenths. Nor can the determination of so small an angle be subject to any material error from the method by which it was ascertained; for it necessarily follows from the duration of the transit of 1769 being observed to be 23m. 10s. shorter at Otaheite than it was at Wardhus. Now it is not analogous to any thing we know in nature, that a body so much larger than the Earth, and at such a vast distance, as the sun necessarily must be from the smallness of his parallax, should revolve round the Earth in 24 hours; which must be the case, if he moves round her at all, for his motion can only be either apparent or real. But without admitting the earth's annual motion, the different phænomena of the celestial bodies cannot be accounted for in any credible manner; for how much more reasonable is it to allow that the stationary and retrograde appearances of the planets are only caused by the Earth's annual motion, (especially when, allowing such a motion, they can be mathematically demonstrated to move round the Sun in orbits nearly circular,) than to suppose that the Sun, accompanied with the planets as satellites moving round him, and these planets again with their respective satellites moving round their primaries in stated periods, should all be carried round the Earth in the course of about a day! That the Earth turns round her axis is consequent upon the admission of her annual motion; but we will offer an argument in its favour drawn from the daily phænomena of the fixed stars. It is known that they constantly keep the same relative positions with respect to each other, which is a presumptive argument in favour of their being fixed bodies. They moreover all appear to make a complete circuit round the north and south poles of the heavens every 23h. 56m. 4s. which is precisely the time which the Earth takes in moving round her axis, if she has any such motion at all. But what adds the last degree of certainty to the above arguments is, that the north and south poles of the Earth are exactly directed to the north and south poles of the heavens, the equator of the Earth to the equator of the heavens, the circles of latitude and longitude on the Earth to their corresponding ones in the heavens, &c. &c. for a proof of which take the following observation of astronomers, that the number of degrees and minutes a fixed star is from either pole of the heavens, so many degrees and minutes precisely must be the situation of that place from either pole of the terraqueous globe through the zenith of which the said star will every day pass. Therefore the Earth has an annual motion, and likewise revolves round her axis. *Q. E. D. Terra Firma*, in geography, is sometimes used for a continent, in contradistinction to islands. *Terra mortua*, or *damnata*, among chymists, is that earthy part, or thick drossy matter, that remains after the distillation of a mineral body.

TILBURY, EAST, a village in Essex, situated near the mouth of the Thames, to the E. of Tilbury Fort. It is supposed to be the place where the emperor Claudius crossed the Thames, in pursuit of the Britons. In this parish is a field, called Cave Field, in which is a horizontal passage to one of the spacious caverns in the neighbouring parish of Chadwell. Of these Camden has given a sketch in his Britannia; and he describes them as in a chalk cliff, built very artificially of stone, to the height of ten fathoms. Derham measured three of the most considerable of them, and found the depth of one of them to be 50 feet, of another 70 feet, and of the third 80 feet. Their origin is too remote for investigation. *Tilbury Fort*, Essex, situated in the parish, of West Tilbury, opposite Gravesend, 28 miles E. by S. of London.

TOULON, a celebrated city and sea-port of France, and the chief town of the dept. of Var. Before the revolution, it was the see of a bishop, and besides the cathedral, and other parishes, contained 9 convents, a seminary, and a college. It is divided into the Old Quarter and the New Quarter. The harbour, respecting these two quarters, is distinguished likewise by the names of the Old Port or the Merchant Port, and the New Port. In the front of the latter is a rope-house, built wholly of freestone, 620 feet in length, with three arched walks, in which as many parties of rope-makers may work at the same time; and above is a place for the preparation of hemp. The long sail-room, the dock-yards, the basins, cannon foundery, armoury, working houses for blacksmiths, joiners, carpenters, locksmiths, carvers, &c. are all very extensive and well contrived. The inhabitants were induced to surrender this city in trust to the English, in September, 1793; but the consequences were dreadful; —Their new friends, in about three months, were driven out of the place with such precipitation, that of 31 ships of the line, found at Toulon, 13 were left behind, 9 only being burned there, and 1 at Leghorn; and 4 lord Hood had previously sent to Brest and Rochfort with republican seamen, whom he was afraid to trust. Napolean Bounaparte, now emperor of the French, first distinguished himself in this siege, at which he served as officer of artillery! The inhabitants are computed at 80,000. TRANSMUTA'TION, *s.* [from *transmuto*, to change, Lat.] the act of changing one nature or substance to another. Nature, Sir Isaac Newton observes, seems delighted with transmutation. Gross bodies and light, he suspects, may be mutually transmuted into each other; and adds, that all bodies receive their active force from the particles of light which enter their composition. Earth, by heat, becomes fire; and, by cold, is converted into earth again; dense bodies, by fermentation, are raised into various kinds of air; and that air, by fermentation, also reverts into gross bodies. All bodies, beasts, fishes, insects, plants, &c. with all their various parts, grow and increase out of water, and aqueous and saline tinctures, and by putrefaction all of them return into water, or any aqueous liquor, again. Farther, water, exposed a while to the open air, puts on a tincture, which in process of time has a sediment and a spirit, and, before putrefaction, yields nourishment both for animals and vegetables. In alchymy, it denotes the art of changing or exalting imperfect metals into gold or silver.

TURKEY, a very large empire, extending to part of Europe, Asia, and Africa, and is thought to be the greatest in the world. Some affirm it is 2000 miles in length, from E. to W. and 1750 from N. to S. Turkey in Europe is divided by the mountains of Castagnas into N. and S. The N. part comprehends Wallachia, Moldavia, Bessarabia, Croatia, Bosnia, Dalmatia, Servia, Bulgaria, and Romania, or Rumelia. The S. part contains antient Greece, in which are seven large provinces, called Albania, Epirus, Macedonia, Janna, Livadia, the Morea, and the islands of the Archipelago. Turkey in Asia comprehends five large parts, namely, Natolia, Georgia, Turcomania, Diarbeck, Suristan, and Syria: some reckon Arabia and Armenia, but these parts have little dependence on the Grand Seignior. In Africa, they possess Egypt, and a small part of Abyssinia in Barbary; there are also other countries in Asia and Europe, which they are not masters of alone, but conjointly with other princes; and Constantinople is the capital of all Turkey. The grand Seignior is absolute master of all the goods and possessions of his subjects, insomuch that they are no better than slaves; but he seldom extends this power to those that live a private life. The Turks have always very numerous armies on foot, the chief of which are the Janissaries. The religion of the Turks has great affinity to that of the Jews; for they believe in one God, and that his great prophet is Mahomet, as the Jews affirmed Moses to be.

U & V.

U IS the twentieth letter of the English alphabet. The sound is short in *burst*, *curst*, *run*, *sun*, *cub*. In some words, it is rather acute than long; as in *brute*, *flute*, *acute*, &c. It is generally long in polysyllables; as in *union*, *usage*, *secure*, *curious*, &c. but in some words it is obscure; as in *nature*, *venture*.

V, the consonant, has its sound uniform, and is never acute. It is placed before all the vowels; as in *vary*, *venal*, *voice*, *vow*, *vulture*. Though the letters *u* and *v* had always two sounds, they had only the form of *v* till the beginning of the fourth century, when the other form was introduced, it being inconvenient to express two sounds by the same letter. The letters *f* and *v* seem to have a similar sound, but are widely different, as may be observed in the words *knife* and *knives*, *life*, and *lives*, *belief*, and *believe*, &c. In numerals, V stands for five, and with a dash thus, $\bar{v}$, for 5000.

VA'CCARY, (*vákary*) *s.* [from *vacca*, a cow, Lat.] a cow-house; a cow-pasture.

VA'CCINE INOCULATION, a modern discovery in medicine, whereby the matter of a pustular eruption on the udder and teats of a cow, is found to produce a regular disease in the human frame, which renders it unsusceptible of the small-pox. It was long known to those employed in dairies, but was first brought into public notice by doctor Jenner, of Berkley, in 1798, and promises to be an inestimable blessing to mankind. The following comparative view of the natural small-pox, the inoculated small-pox, and the inoculated cow-pox, has been published by the Royal Jennerian Institution, in London.——NATURAL SMALL-POX,—a contagious disease, for the most part violent, loathsome, and dangerous; of which it is computed that one in twelve of the human race perishes. In London 3000 annually; in the United Kingdom 40,000! INOCULATED SMALL-POX, also contagious; for the most part mild, but sometimes violent and loathsome; of which one in 300 is said to die. In London, about one in 100. The inoculation of the small-pox having been but partially adopted, has been the means of spreading the infection, and thus increased the general mortality. INOCULATED COW-POX,—*not contagious*; and, when properly conducted, uniformly mild, inoffensive, seldom painful, never fatal, and an infallible preventive of the small-pox; besides which, there is no medicine required, no consequent deformity or disfiguration, and no supervenient disease.

To VACI'LLATE, *v. n.* [*vacillo*, Lat.] to reel; to shake; to totter; to stagger.

VENICE, the republic of, a country of Italy, which comprehends fourteen provinces, namely, the Dogado, the Paduano, the Vicentino, the Veronese, the Bresciano, the Bergomasco, the Cremasco, the Polesinodi-Rovigo, the Marca-Trevigiano, the Feltrino, the Bellunese, the Cadorino-Friuli, and Istria. The government of the republic of Venice is aristocratic, for none can have any share in it but the nobles. The chief magistrate has the title of Doge, and is elected by a plurality of voices, and keeps his dignity for life. His office is to give audience to all ambassadors; to marry the Adriatic sea in the name of the republic, on Holy Thursday; to preside in all assemblies of the state; to have an eye over all the members of the magistracy; and to nominate to all the benefices annexed to the church of St. Mark. On the other hand, he is to determine nothing without the consent of the council; he is not to open any letter addressed to the republic, or that comes from the republic; he is not to receive any present; he is not to leave the city without permission of the states; he is not to chuse an assistant; and he is never to resign his dignity. In short, he is a prisoner in the city, and out of it he is no more than a private person. As to religion, the Venetians are Roman Catholics, and yet they tolerate the Greeks, Turks, Persians, but not the Protestants. The head of the clergy is the Patriarch of Venice, who must be a noble Venetian, and is elected by the senate. In times of peace, the Venetians generally keep an army of 16,000 regular troops, and 10,000 militia. On the sea they have always a small fleet, composed of a few men of war, frigates, and galleys.——Such *was* the state of Venice, during her independence; but in 1798 this country was overrun by the French, and afterwards ceded mostly to the House of Austria. However, the war of 1805 brought it again under the dominion of France, and it is now included in Buonaparte's kingdom of Italy.

VENICE, the capital of the above republic, is one of the most considerable places in the world. It is the see of a patriarch, and the seat of an university. According to the historians, Venice stands on 72 small islands in the gulph of Venice. As there is no passing through this city in carriages, the inhabitants make use of a kind of boats called gondolas. There are above 500 bridges over the canals, the most famous of which is that called the Rialto. It is built of white marble, and has but one arch, in which its principal beauty consists, and is 90 feet from one extremity to the other. There are 150 palaces, the finest of which is that of the Doge, fronting St. Mark's Place. The cathedral church is that of St. Mark, in which they pretend to keep the body of St. Mark the Evangelist. It is gloomy within, but its walls are of marble; and the pillars of the font encrusted with jasper and porphyry. There is also a library, in which are a number of Greek manuscripts, but none of them above 500 years old. Here are about 170,000 inhabitants. Venice is 212 miles N. of Rome, and 300 N. by W. of Naples. Lat. 45. 27. N. lon. 12. 8. E.

VE'NUS, *s.* [Lat.] in the Copernican system, is one of

the inferior planets, and the second in order from the sun. To the naked eye she is the most beautiful and splendid of all the celestial bodies, being sometimes so bright as to cast a faint shadow of an object, and not uncommonly seen in the day time. She moves round the sun in an orbit very nearly circular, the diameter of which is about 136 millions of miles, in 224d. 16h. 41m. 32 2 5ths. called her tropical revolution; but her sidereal, anomalistic, and synodic periods are, 224d. 16h. 49m. 12 7 10ths. 224d. 17h. 4m. 28 1-5ths. and 583d. 22h. 7m. 6s. respectively. Her magnitude is nearly equal to the earth's. She turns round her axis, according to Mr. Schroeter, in about 23h. 21m. her year containing 230 19-21sts, of such days. The inclination of her orbit to the ecliptic, or her greatest heliocentric latitude, is 3° 23′ 20″; but her greatest possible geocentric latitude, on account of her nearness to the earth, amounts to 9° ¼, being greatest of all in those inferior conjunctions that happen when the planet is 90° from her nodes, the earth being at the same time in her perihelion. The place of her descending node at the time of her transit over the sun's disk in 1761, was found to be in 14° 31′ 52″ of Gemini; and at the transit of 1769, 14° 35′ 36″ of the same sign; from which it appears, that her nodes have an annual motion of about 28″; but M. de la Lande, from probably more accurate elements, has fixed it at 31″. The place of her aphelion, anno 1750, was in 8° 13′ of Aquarius, having a progressive motion of about 4° 10′ in 100 years. The eccentricity of her orbit is 51 out of 10,000, of those parts into which the earth's distance from the sun is supposed to be divided, and the equation of her orbit 48′ 36″. When viewed through a telescope, she is rarely seen to shine with a full face, but has phases and changes just like those of the moon, being increasing, decreasing, horned, gibbous, &c. her illuminated part being constantly turned towards the sun, or directed towards the east when she is a morning star, and towards the west when an evening star. This planet, on account of her moving in an orbit between the sun and the earth, is never seen in opposition to the former, and never recedes from him more than 47° ¾, called her greatest possible elongation. In her inferior semicircle she appears to move contrary to the order of the signs; the length of which retrogradation is from 42 to 44 days, according to her situation with respect to her perihelion or aphelion at the time; the quantity of the arc moved in both cases amounting to about 16°. Mr. Schroeter has discovered inequalities on her surface similar to our mountains, and also that she is favoured with a twilight for some time after the sun sets to any particular part of her globe, and before he rises to the same; from which an indisputable argument of her having an atmosphere is deduced. See Phil. Trans. 1795. She sometimes in her inferior conjunction transits or passes over the sun like a round black spot, eclipsing a part of his disk visible to the naked eye. But this appearance is so very rare, (sometimes not once, and never more than twice, in a hundred years,) and of so great utility in determining the solar parallax, that it has engaged the curiosity and attention of most astronomers of the last century. Several were sent to various parts of the globe to observe those famous ones of 1761 and 1769; the result of which was, that the sun's parallax is about 8″½. If Venus moved in an orbit round the sun coincident with the plane of the earth's orbit, she would traverse the solar disk every synodic revolution; but this not being the case, she can only cross it in two opposite points called her nodes, very near either of which (not more than 1°¾) she must necessarily be, at the time of her inferior conjunction, for such a phenomenon to take place; so that we need not wonder at the great rarity of such appearances.—There will only happen three such phenomena before the year 2004 inclusive; the times of which we will note down, together with the distance of the planet's and sun's centres at the middle of the transit, as deduced from Dr. Halley's periods, corrected from accurate observations upon the two last transits. The first of these will take place at the ascending node on the 9th of December, 1874; the middle of which will be at about 4h. 6m. in the morning, the planet being then 13′ 2″ to the north of the sun's centre: the second also happens at the ascending node on the 6th of December, 1882; the middle being at about 5h. 13m. in the evening, the planet having then 12′ south latitude. The third and last we shall note happens at the descending node on the 8th of June, 2004, the middle being at about 6h. 30m. in the morning, and the distance of the centres 9′ 9″, the planet being to the south. Her apparent diameter, at the time of her transit, is so large as to take almost 20′ in entering her whole body on the sun's disk; being found to be about 58″. The longest duration of a central transit of Venus at both nodes is 7h. 56m. according to Dr. Halley. In the heathen mythology, the goddess of love and beauty. In chymistry, copper metal. In heraldry, the green colour in the arms of sovereign princes.

VERA'CITY, *s.* [*véracité*, Fr. from *verax*, Lat.] truth; consistency of words with facts; or consistency of deeds with words.

VERB, *s.* [*verbe*, Fr. *verbum*, Lat.] a part of speech signifying existence, with action or passion.

VE'RNAL, *a.* [*vernus*, from *ver*, the spring, Lat.] belonging to the spring. *Vernal equinox*, in astronomy, is the time when the sun crosses the equinoctial line in the spring, about the 21st of March, making the nights and days of an equal length.

VE'RNALGRASS, *s.* in botany, a species of anthoxanthum. It goes also by the name of spring-grass

VERNI'LITY, *s.* [*vernilitas*, from *verna*, a slave born in the house, Lat.] servile flattering behaviour.

VERO'NA, a large, antient, and famous town of Italy, in the republic of Venice, and capital of the Veronese, with an academy. The streets are neither clean nor straight; but there is a handsome place called the Piazza-d'Armi, in which is a marble statue, representing the republic of Venice. The bishop and governor of the town have superb palaces, but not so magnificent as that of the count Maffei. The townhouse and the opera house are fine buildings; but the most remarkable structure in this city is the antient amphitheatre built by the Romans, in which there are 44 rows of seats, or benches, of white marble, which will conveniently hold about 25,000 persons. It is seated on the river Adige, on which they transport merchandise to Venice. This river divides it into two parts, which communicate by two handsome bridges. It is 17 miles N. E. of Mantua, and 62 S. W. of Venice. Lat. 45. 26. N. lon. 11. 24. E.

VERO'NICA, *s.* a portrait of the face of our Saviour on a handkerchief.

VIENNA, the capital of the circle of Austria, in Germany, and of the whole Austrian empire, where the emperor resides. The city itself is not large, and contains about 60,000 inhabitants, being limited by a very strong fortification; but the suburbs and town together are said to contain above 300,000. The streets, in general, are narrow, and in part crooked, and the houses built high; but some of the public buildings are magnificent. No houses without the walls are allowed to be built nearer the glacis than 600 yards; so that there is a circular field of that breadth all round the town, which has a beautiful and salutary effect. Vienna contains 50 churches or chapels, and 21 convents. Provisions are brought here in great plenty and variety. Here is a sort of harbour on the Danube, where there are magazines of naval stores; and ships have been fitted out to serve on that river against the Turks. The manufactures of this city are numerous, and the trade extensive. Vienna is seated at the place where the river Vien falls into the Danube. This capital was twice ineffectually besieged by the Turks, viz. in 1589 and 1683, in which latter year the siege was raised by John Sobieski, the king of Poland, who

totally defeated the Turkish army before the walls of this place; but in the present century, it has been twice taken by the French; first, on Nov. 12, 1805, without opposition; and again on May 13, 1809, after a short resistance. Latitude of the observatory of Vienna 48° 12′ 36″ N. lon. 16° 21′ 54″ E. from Greenwich.

VIENNE, a very antient and considerable city in the dept. of Isere. It is seated on the left bank of the Rhone, over which it had formerly a good bridge, of which only some piers remain, that render the navigation dangerous. Its commerce consists in wines, silk, and cutlery, which last is highly esteemed. Near Vienne, on the banks of the Rhone, are produced the excellent wines of Cote-Rotie, in a soil where the grape, as the name imports, is almost parched up by the sun; and, a little further, to the left, are grown the famous hermitage wines, so called, because a hermit had his grotto there. Vienne is 15 miles S. of Lyons, and 265 S. E. of Paris. Lat. 45. 31. N. lon. 4. 55. E.

To VIEW, (*vew*) *v. a.* [from *veu*, Fr.] to survey, or look on by way of examination or curiosity; to look at; to see.

VIEW, (*vew*) *s.* a prospect; sight; survey; the reach of sight; appearance or show; exhibition, or display to the mind; intention or design; prospect of interest. SYNON. *View* and *prospect*, in my opinion, differ in this; that the former implies a sight more extensive than the latter.

VIGIL, *s.* [*vigile*, Fr. *vigilia*, Lat.] a watch, or devotion paid to saints while other persons are generally at rest; the fast kept before a holiday.

VIGILANCE, or VIGILANCY, *s.* [Fr. from *vigilo*, to watch, Lat.] forbearance of sleep; watchfulness.

VIGILANT, *a.* [Fr. from *vigilo*, to watch, Lat.] watchful; circumspect; attentive.

VIGILANTLY, *ad.* watchfully; circumspectly.

VIGNETTE, *s.* [Fr.] the flourish or ornament placed at the beginning of a book, preface, or dedication, usually printed upon the sheet after the letter-press has been worked off.

VIGO, a town of Spain, in Galicia, with a good harbour, seated on the Atlantic ocean, 12 miles N. N. W. of Tay, and 260 W. N. W. of Madrid. Lat. 42. 13. N. lon. 8. 33. W.

VIGOROUS, *a.* [*vigoreux*, Fr. from *vigeo*, to be strong, Lat.] full of strength and life; stout; lively; strong; energetic.

UNITED PROVINCES, usually called HOLLAND, are situated between 51. 20. and 53. 20. N. lat. and 3 and 7 degrees E. lon. being about 139 miles in length, and nearly the same in breadth. This country was formerly divided into seven provinces, viz. Zealand, Holland, Utrecht, Guelderland including Zutphen, Overyssel, Friesland, and Groningen, exclusive of the islands Texel, Vlieland, Schelling, Ameland, &c. at the entrance of the Zuyder Zee. It has of late been divided into eight departments, (including Dutch Brabant,) each of which are subdivided into districts, and have their primary assemblies. They are as follow. 1. The department of the Scheldt and Meuse, comprehends the western part of Dutch Brabant, the islands in the southern part of the province of Holland, the whole of the province of Zealand, and Dutch Flanders. The chief town is Middleburgh, in the island of Walcheren. 2. The department of the Dommel, is composed of the eastern part of Dutch Brabant, the island of Betuwe formed by the Rhine and the Wahal, the island of Bommel formed by the Meuse and the Wahal, and a part of the south of Holland, as far north as Gorcum. The chief town is Bois-le-Duc. 3. The department of Delft, comprehends the greater part of the middle of the province of Holland. The chief town is the Hague. 4. The department of Amstel, is composed of Amsterdam and its environs. The chief town is Amsterdam, on the river Amstel. 5. The department of the Texel, comprehends the north of the province of Holland, the districts of Haerlem and of Leyden, and the islands Texel, Vlieland, and Schelling. The chief town is Alkmaer. 6. The department of the Rhine, is composed of the country of Zutphen, the quarter of Wetuve, nearly the whole of the province of Utrecht, and part of the province of Holland. The chief town is Arnheim on the Rhine. 7. The department of Old-Yssel, comprehends the province of Over-Yssel, the northern part of Guelderland, and the middle of the country of Drenth. The chief town is Zwoll. 8. The department of the Ems, is composed of the provinces of Friesland and Groningen. It has its name from its vicinity to the river Ems on the borders of Germany. The chief town is Leuarden. The principal rivers of Holland, are, the Rhine, the Waal, the Yssel, the Leck, and the Maes. The soil of Holland is marshy, and a great part covered with water and ice in the winter; insomuch, that in the spring they are forced to drain off the water, in order that the land may be left dry. The air is gross and unhealthy, on account of the exhalations. The water is generally bad, and their fires are commonly made of peat, which they dig out of the spongy land. The numerous canals which are cut to drain the land, are very commodious for travelling from one place to another in boats; and in winter they slide from one place to another with incredible swiftness, by means of skates, in which exercise the women are as skilful as the men. The inhabitants are robust, laborious, patient, free, open, affable, and pleasant in conversation. A Dutchman is naturally phlegmatic, and slow to anger; but when heated is not easily appeased. The principal virtue of this nation is frugality. N. B. These provinces are now united to the French empire.

W.

WIS the twenty first letter of our alphabet, and is compounded, as its name implies, of two V's. The Hebrews, Greeks, and Romans, had it not; it is peculiar to the northern nations, the Teutons, Saxons, Britons, &c. It is not used by the Italians, French, Spaniards, nor Portuguese, except in proper names, and other terms borrowed from languages in which it is originally used, and even then it is sounded like single v. This letter is of an ambiguous nature, being a consonant at the beginning of words, and a vowel at the end. It may stand before all the vowels except *u*, as in *wager*, *well*, *wife*, *worship*; and follows the vowels, *a*, *e*, *o*, and unites with them into a kind of double vowel, or diphthong, as in *law*, *crew*, *cow*, &c. It also goes before *r*, and follows *s*, and *th*, as in *wrong*, *swift*, *thwart*; it likewise goes before *h*, though in reality it is sounded after it, as in *why*, *when*, *where*, *what*, &c. In some words it is obscure, as in *stow*, *shadow*, *widow*; and in others it is silent, as in *wrong*, *write*, &c.

It was incorporated with England in 1538, and sends 24 members to the British house of commons. The western part is bounded by St. George's channel and the Irish sea; on the S. by the Bristol channel; on the N. by the Irish sea; and on the E. by the counties of Chester, Salop, Hereford, and Monmouth. It contains 751

parishes, and 58 market towns. The country is very mountainous and plentiful. In their hills are rich lead and coal mines, with quarries of free-stone. The mountains in this country are reckoned equal in height, if not higher than any in Britain. Snowden and Plinlimmon are the most celebrated. The former is 1240 yards in height. They are a brave hospitable people, and were never conquered by the Saxons. Their last prince, Llwellin ap Griffith, lost his life in defence of his country, when Edward I. conquered it in 1283. Since whose reign, his queen being here delivered of a son, the king's eldest son has been styled Prince of Wales, and a large revenue out of this country appropriated to the principality. Among the antient Welsh was an order of men called bards, who composed songs relating the actions of their illustrious men. The last of these, named Taliesin, lived about the middle of the 5th century, and many of his verses are still extant. Edward I. when he conquered Wales, caused all their bards to be put to death. Wales has produced many learned men in the several parts of literature; and, indeed, their genius may be put on a level with that of the best of their neighbours. It is watered with many rivers, of which the principal are the Dee, Wye, Usk, Conway, Cluyde, and Twy. The principal towns must be sought for under the names of the counties.

WILLIAM I. (surnamed the Bastard, or the Conqueror) was the seventh duke of Normandy from Rollo the first duke, who made an attempt upon England in the reign of king Alfred. His father duke Robert, brother to duke Richard the third, was never married; but being charmed with the graceful mien of a young woman, named Arlotta, (whence it is said came the word *harlot*) a skinner's daughter, as he saw her dancing with other country girls, he took her for his mistress, and by her had this William. Duke Robert, about seven years after, taking it in his head to go on a pilgrimage to Jerusalem, before his departure caused the states of Normandy to acknowledge his young son for his successor; and, dying in his journey, William accordingly succeeded him in 1035, being then about nine years of age. He met with a great deal of trouble during his minority, from several pretenders to the dukedom, as well as from the king of France, who wanted to get it into his own hands; but by his vigour and conduct, and the wisdom of those in the administration, he got the better of all his enemies, and established himself firmly in the possession of his sovereign authority. And, in all probability, he might have passed the rest of his days in peace, if his ambition had not put him upon making new acquisitions. His having an eye to the crown of England, it is very likely, was what brought him over hither to make a visit to king Edward, his cousin, who had no children, and who then, it is generally thought, promised him to make a will in his favour. However, from this time he began to look upon himself as having a claim, such as it was, to be Edward's successor; and seemed resolved, if all other methods failed, to accomplish his design by force of arms. How he did this, see the life of HAROLD, and his success in the memorable battle of Hastings, by which he in a manner did his business at once. The first thing he did after the battle of Hastings, was to lay seige to Dover, in order to secure his retreat in case of necessity, and to have a place from whence he might easily send for supplies from Normandy. The consternation it was in, made it soon surrender; which having ordered to be more strongly fortified, and spent some days there to forward the work, he marched with his victorious army for London. In the mean time, the city of London was in the utmost confusion, some being for one thing, and some for another; nor could they by any means agree in their opinions. Among other projects, some were for placing Edgar Atheling on the throne, and the earls Edwin and Morcar, who had retired to London after the battle of Hastings, were at the head of this party. But all they could do, was to prevail on the citizens to shut their gates against William, till they could fix on some resolution. The duke by this time was come to Southwark, and there encamped, and lay some days, expecting the voluntary submission of London; but, on the contrary, Edwin and Morcar, took this opportunity to stir up the citizens to make a sally upon the Normans; which they did, but it was easily repulsed. This made the duke sensible, it was necessary to take more rigorous methods; and, as a siege, which might have lasted a great while, would have been very inconvenient in his present circumstances he resolved to lay hold of the consternation the city was then in, to subdue them by terror rather than by force. To this end he posted himself at Wallingford; and sent out detachments to plunder the country near London, to frighten the citizens, and to cut them off from provisions; and, at the same time, burnt Southwark to the ground. The two earls abovementioned still laboured hard for Edgar, and the majority of the people were on their side; but their measures were broken by the clergy then in London, and the two archbishops at their head who were for submitting to the duke, and had formed a strong party among the citizens for that purpose; so that Edwin and Morcar, finding they could not prevail, retired into the North; and immediately after, the two archbishops, with the bishop of Winchester, and Edgar himself, went over to the duke, who was then at Berkhamstead; and their example was soon followed by a great many persons of distinction. But the Londoners being still unresolved, the duke drew nearer the city, as if with a design to besiege it; upon which the magistrates, despairing of being able to defend it in the midst of the present confusion, went out and met him, and presented him with the keys of the gates. And then, after holding a consultation with the prelates and nobles, who had before submitted, they waited on him in a body, and made him an offer of the crown. After an affected hesitation, he accepted the crown as their gift. William was crowned at London on Christmas-day, having first caused a fort to be built, which he garrisoned with Normans, because he still suspected the citizens. He then solemnly swore, "To protect the church and its ministers, to govern the nation with equity, to enact just "laws, and cause them to be duly observed, and to forbid "all rapines and unjust judgments." What was most surprising, and saved William much trouble, which in all appearance he had still to go through, was, that as soon as it was known that he had been crowned at London, he was immediately, without any opposition, acknowledged king throughout the whole nation. William, a few days after his coronation, returned from London to Barking, where multitudes came and submitted to him, and among the rest Edwin and Morcar. He received them in the most favourable manner, assured them of his protection, and in their presence gave prince Edgar large possessions, who was so beloved by the English, that he was generally called England's Darling. Soon after he laid the foundation of a church and monastery in the place where Harold was slain, and ordered that the monastery, when finished, should be called Battle-Abbey. In the beginning of his government, he used great moderation towards the English, and expressed a tender regard for them; and the three first months of his reign passed to their great satisfaction. But this short time of tranquillity and mutual confidence was followed by jealousy, mistrust, and severity on the king's side, and frequent revolts and commotions on the people's; in which, whether the king was most to blame or the people, cannot easily be determined, by reason of the partiality of writers on each side, according as they stood affected. This, however, is certain, that the English were ill treated by this king, that he showed great partiality to the Normans, and ruled the natives with a despotic sway, exercising many acts of severity upon them, and

treating them, to all intents and purposes, as a conquered people. It is certain also, that there were many revolts, and attempts to shake off the Norman yoke; but they all proved ineffectual, and served only for a handle to yet greater acts of severity. The beginning of the year 1067 king William, without any other visible reason than to display his new grandeur among his old subjects, went over to Normandy, taking with him such English lords as he most suspected, to prevent any thing being done to his prejudice in his absence: for which reason also he placed strong garrisons of Normans in all the castles. His brother Odo, bishop of Bayeux, and William Fitz-Osborn, were entrusted with the government of the kingdom; and these sticking at no methods to enrich themselves, exceedingly oppressed the English. The Kentish men at this time attempted to recover their liberty, and called to their assistance Eustace, earl of Boloign, who, failing in his project of surprising Dover castle, retired to his ships, and left the Kentish men to the mercy of the regents. Edric Forester, an English lord, also took up arms in Herefordshire, and cruelly treated all the Normans that fell into his hands. This hastened the king's return to England, who, instead of punishing the regents, approved of their conduct, to the no small discontent and mortification of the English. In 1068, he revived the tax formerly called Danegeld, which was levied upon the poor English with all imaginable rigour. And now insurrections and revolts followed in abundance. The inhabitants of Exeter refusing to take the oath to the king, and to admit a Norman garrison, William was preparing to besiege it in form; and the citizens had no other course to take but to implore his mercy. At the earnest entreaties of the clergy he pardoned them, how much soever in his own mind he was against it; and, to keep them in order for the future, he caused a castle to be built in the city, and garrisoned with Normans. The king sent commissioners into all parts, to inquire who had sided with Harold, and to confiscate their estates. Edwin and Morcar, provoked at this treatment of the English, revolted, and having raised an army, were reinforced by Blethwin, king of Wales, with a good number of troops. But the king marching with all expedition against them, with a great superiority of forces, broke all their measures; upon which the two earls submitted, and were pardoned. But this act of seeming clemency to the leaders in the rebellion lost all its effect, by his severely punishing others who were less guilty; nay, he caused several who had no hand in the revolt to be shut up in prison; which spread a terror through the nation; as did also his building castles in divers places, which, it was easy to perceive, were designed to overawe the English. There were, indeed, as may well be supposed, great animosities between them and the Normans; the latter behaving towards the English much as the Danes formerly did, and being countenanced in their insults by the king, whilst the complaints of the English were not at all regarded. The consequence was, that many murders were committed on both sides, and an edict was published purely in favour of the Normans. Morcar and several other lords, mistrusting the sincerity of the king's behaviour towards them, retired into Scotland, and prevailed upon prince Edgar to go along with them, with his mother and sisters. The king of Scotland received them with all due respect, and married Margaret, Edgar's eldest sister, from whom descended Matilda, grandmother of king Henry II. in whom the royal families of the Saxons and Normans were united. Though king William was pleased at these lords leaving the kingdom, where they had so great an influence, yet perceiving hereby how the English stood affected, he proceeded to greater acts of severity, resolving by humbling them to secure himself from their resentment. With this view, it is said, he forbade them to have any lights in their houses after eight o'clock at night, ordering a bell to be rung at that hour, which was called the Curfew, from *courre feu*, i. e. cover fire; at the sound of which they were obliged, under severe penalties, to put out their fires and candles. It must be owned, indeed, that this affair of the Curfew is not supported by any competent authority. But this is certain, that after the Northumberland malecontents had called in the Danes, whose general, Osborn, the king of Denmark's brother, king William bribed by large presents to go off, he shewed no mercy towards the English; but after having, for a terror to the rest, ravaged the whole country between York and Durham, so as not to leave a house standing, he removed all the English from their posts, took away their estates, seized upon all the fiefs of the crown, and gave them to the Normans, from whom are descended many of the great families at this day in England. The clergy expected great things from the king, and therefore were the most forward to submit to him, after the battle of Hastings: but they were disappointed; for William now put the church lands upon the same footing with the rest, obliging them to furnish a certain number of men for his wars, though by the charter of the Saxons they were exempted from all military service. He quartered his troops upon the monasteries, and obliged the monks to supply them with necessaries. He moreover seized upon the money and plate in the religious houses, under pretence that the rebels had concealed their valuable effects there; and deposed several bishops and abbots that he did not like, putting Normans or other foreigners in their room. In 1071, a great number of malecontents betook themselves to the isle of Ely, strongly fortified it, and chose Hereward, one of the bravest soldiers in the kingdom, for their leader. The king was very much alarmed at this proceeding, and marching in all haste, blocked the rebels up in the isle. They were so well fortified that he could not come at them, and had so good a store of provisions, that a long time would be required to starve them out. And so having continued the siege, or blockade, for a great while to no purpose, he bethought himself of an expedient, which did his business effectually; which was, to seize on the manors belonging to the monastery, which were without the limits of the isle. Upon this the abbot and monks, in order to recover their possessions, delivered up the isle, and all that were in it, into the hands of the king. Hereward alone escaped: as to the rest, some had their eyes put out, or their hands cut off, and others were thrown into different prisons; among the rest, Egelrick, bishop of Durham, who had been so bold as to excommunicate the king, was starved to death in prison. The king of Scotland had taken the opportunity of the troubles in England, to invade the northern counties, which he ravaged in a cruel manner. But as soon as the affair of Ely was over, king William marched against him. The Scotch king hereupon retired into Scotland, but William followed him thither. He not being willing to hazard a battle in his own country, offered to accomodate matters by a treaty; which William agreed to, and obliged the Scotch king to do him homage. In 1073, Philip, king of France, being jealous of the greatness of king William, on a sudden invaded Normandy without any declaration of war; upon which William went over with a great army, with which he retook Mans, and the whole province of Maine; and Philip soon growing weary of the war, concluded a peace with king William. Prince Edgar, about this time, came to the king out of Scotland, implored his pardon, and submitted. The king received him very graciously, and gave him an allowance of a pound of silver a day. From this time he continued in obedience, and gave the king no farther disturbance. During the king's absence, some disgusted Norman lords formed a conspiracy to depose him, and prevent his return, and drew earl Waltheoff, the only English lord the king retained in his favour, into the plot. But he soon repenting, went over and discovered it to the king before it came to any head, imploring at the same time his pardon, which the king readily granted. Notwithstanding which, soon after his return, the earl was apprehended, beheaded, and buried under the scaffold. And many of the innocent English, who were not at all concerned in the conspiracy, were severely punished, as well as the guilty Normans. King William now enjoyed some tranquillity, but in the year 1077 more work was cut

out for him abroad. For his eldest son Robert, instigated by the king of France, rebelled against him in Normandy, and endeavoured to make himself master of that duchy. William went over, and his son persisted in his opposition, and in the heat of an engagement wounded him in the arm without knowing him, and dismounted him. But when he knew it was his father, he alighted, set him upon his own horse, and submitted entirely to his mercy. William brought him with him into England, and in the year 1080, sent him against the Scots, who had renewed their incursions. But this war also ended in a treaty between the two nations, and there was nothing remarkable in this expedition but Robert's founding the town of Newcastle-upon-Tyne; about which time also king William built the famous tower of London, to be a check upon the citizens, whom he all along suspected. Let us now see, in few words, how William managed his domestic affairs in time of peace. He did all he could to introduce the Norman language into England, caused the Saxon laws to be translated into Norman, and published his own laws in that tongue, and commanded it to be taught in all schools. The effect was, that in common use, a third language was by degrees introduced, which was neither English nor Norman, but a mixture of both. He erected new courts of justice, before unknown to the English, and very incommodious to them, and ordered all law proceedings there to be in the Norman tongue. He had an immense revenue; and that he might know what every man was to pay him out of his estate and effects, he ordered a general survey to be made, not only of his own lands, but of all the lands in England; as also what every man was worth in money, stock of cattle, &c. all which were set down in a book called *Doom's-day book*, which to this day is preserved in the Exchequer. As he was very fond of hunting, he dispeopled the country in Hampshire for above thirty miles in compass, demolished both churches and houses, to make a forest for his diversion, which was called New Forest. In short, all his actions savoured of a most arbitrary and absolute prince. William having enjoyed a tranquillity of several years, every one thought he would have ended his days in peace. But all on a sudden he makes vast preparations, goes over to Normandy, and enters upon a fierce war against France. A truce soon ensued, which was broke by an unlucky jest of king Philip. William being grown very fat and unwieldy, was passing through a course of physic, when one coming to Philip from Roan, he asked him, "Whether the king of England was delivered yet of his great belly?" William being told of this, was so enraged, that he sent him word, that as soon as he was up, he would offer in the church of Notre Dame, at Paris, ten thousand lancets by way of wax-lights. Accordingly, he renewed the war with the utmost fury, but it occasioned his death. For having made great ravages, and besieged and took Mantes, he ordered it to be burnt to the ground; and in his return to Roan, having bruised the rim of his belly against his saddle, he fell into a fever, which carried him off on the 9th of September, 1087, in the sixty-first year of his age, after having reigned in Normandy twenty-two years, and twenty-one in England. He was buried in the Abbey church at Caen, which he himself had founded. It is remarkable that his death was no sooner known, than his son Henry snatched his legacy out of the Treasury; the noblemen returned to their castles; and the domestics, having robbed the household, ran away. William's courage and policy are not to be questioned, and it is certain that he was indefatigable in executing whatever he designed. When he lay on his death-bed, he seemed to reflect seriously on his past actions, and to view them in a different light from what he had done in the time of his health and vigour. He ordered great sums of money to be given to the poor, and to the churches, particularly for rebuilding those he had burnt at Mantes. Then ordering his chief officers to stand about his bed, he made a long harangue to them, weak as he was, wherein he talked much of the reputation he had acquired by his military achievements. Yet he could not help owning, he had unjustly usurped the crown of England, and was guilty of all the blood spilt on that occasion. And though, he said, he durst not bequeath a crown which of right was none of his, but left it to the disposal of God; yet he recommended William, his second surviving son, for his successor, and did all in his power to secure the crown to him. He had three other sons, besides William, by his wife Matilda, daughter to the earl of Flanders. To Robert, the eldest, he gave the duchy of Normandy. Richard was killed by a stag in New Forest. To his youngest son Henry he bequeathed an annuity of 5000 marks. He had also six daughters by the same Matilda; Cecily, abbess of Caen; Constance, married to the duke of Bretaign; Adeliza, promised to Harold when he was in Normandy, died young; Adela, married to the earl of Blois; Gundred, to William Warren, earl of Surry; and Agatha, espoused to Alphonso king of Galicia. From the transactions of William's reign, he appears to have been a prince of great courage, capacity, and ambition; politic, cruel, vindictive, and rapacious; stern and haughty in his deportment; reserved and jealous in his disposition. He was fond of glory, and, though parsimonious in his household, delighted in pomp and ostentation. Though sudden and impetuous in his enterprises, he was cool, deliberate, and indefatigable, in times of danger and difficulty. His aspect was nobly severe and imperious, his stature tall and portly, his constitution robust, and the composition of his bones and muscles so strong, that there was hardly a man of that age who could bend his bow, or handle his arms.

WILLIAM II. surnamed Rufus, during his father's last illness in Normandy, was concerting measures in England to secure his succession to the crown. Though it was the Conqueror's desire that he should succeed him, yet there was great danger of a party being formed against him in favour of his elder brother Robert. But as Robert was out of the kingdom, William with the more ease accomplished his designs; and by the management of Lanfranc, archbishop of Canterbury, who had great interest among the people, both English and Normans, and had gained over the leading lords of both nations, and by the favour of Eudo the high treasurer, he ascended the throne, and was crowned 18 days after his father's death, Sept. 27, 1087. He was surnamed Rufus, from his being red-haired, and was now thirty years old. He was remarkable for no good quality but his courage, which, however, for the most part, was more like the fierceness of a wild beast than the bravery of a hero. He was very ill-natured, and a perfect brute in his behaviour; was wholly indifferent as to religion, and had no regard for honour or honesty. He was greedy of money, but it was to squander it away upon idle expences. In fine, he had all his father's vices without his virtues; and historians agree in representing him as bad a prince as ever sat on the English throne. These historians were indeed monks and ecclesiastics, who might be prejudiced against him for his seizing the revenues of the church. However, as scarce any action of his life deserves commendation, their representations seem to be but too well founded. In 1088, a formidable conspiracy was set up against him by his uncle Odo, bishop of Bayeux. The design was to depose William, and set Robert on the throne. Several Norman lords and bishops joining in the plot, and many of the English also being prevailed on to favour it, when they thought matters were ripe, they invited Robert to come over, who promised soon to be with them. The conspirators then fortified themselves in several places, and William seemed to be in a most dangerous situation. But Robert's indolence and dilatory temper, who did not come over with his forces as was expected, gave him time to extricate himself out of this danger. He first gained over the English, then he fitted out a fleet, and marched against Odo, and the other rebels, with an army of Englishmen, took Pevensey, Rochester, and Durham, and the other places, where they had shut themselves up, broke all their measures, and entirely dispelled the threatening storm. Though William was indebted to the English for having by their means crushed the conspiracy, and though he had made

them many fair promises, yet it was no sooner over, but he began to oppress them even worse than his father had done. William seized upon the vacant benefices, and after he had stripped them of every thing he could turn into money, he sold them to the highest bidder. He seized upon the temporalities of the see of Canterbury, and kept them in his hands four years, and did the same by all the other bishoprics that became vacant in his reign. Soon after, William, to be revenged on his brother Robert for the late conspiracy, and perhaps from a desire of enjoying all his father's dominions, invaded Normandy, and made himself master of several places. Robert implored aid of the king of France, who came to his asistance; but William having found means to bribe him, he retired without doing any thing, and William proceeded to take more places, and bribed some of the burghers of Roan to undertake the delivering it into his hands. But prince Henry joining his brother Robert, saved it; for entering the city on a sudden, he seized the chief of the conspirators, and threw him headlong from a tower; which bold stroke not only preserved the capital, but, in effect, all Normandy. William soon after, in 1091, was obliged to strike up a peace with duke Robert, on this condition, among others, That upon either of the brothers dying without heirs, the survivor should succeed to all his dominions. Whilst William was in Normandy, Malcolm, king of Scotland, made an incursion into Northumberland, and William at his return resolved to revenge this insult. He artfully induced his brother Robert to come over and accompany him in this expedition, fearing he should in his absence seize on those castles in Normandy that he held by the late treaty. His army suffered greatly by several disasters in Scotland; but Malcolm, fearing the ill consequences of a war in his own country, sent William proposals for an accommodation, which were readily accepted, and the Scotch king obliged himself to pay the same homage to the king of England he had formerly done. But Robert, perceiving he was only amused by his brother, to draw him into this expedition, returned home greatly disgusted. The king continued his arbitrary proceedings, and oppresssed his subjects, Normans as well as English, more and more every day, which made them all wish for his death, as the only remedy to the evils they groaned under. And now they thought their wishes were going to be accomplished; for, in 1093, a dangerous distemper seized him at Gloucester, so that he himself thought his end approaching; and the fear of death made him resolve, if he ever recovered, to reform all that had been amiss in his government; being recovered of his illness, he presently forgot all his good resolutions, returned to his courses, retracted, as far as was in his power, the good orders he had given in his sickness, and even increased abuses of government, instead of correcting them. In 1094, we again find king William at war with his brother Robert in Normandy, who, as William had not performed his part of the late treaty, seemed resolved to take from him the places he held there. Being assisted by the king of France, he gained several advantages over William, who at last had recourse to his old artifice, and bribed the French kiag once more to draw off his forces. In order to raise money, he sent orders into England for levying 20,000 men, and to impress such as were of some substance, and did not care to leave their families. When they were just going to embark, they were discharged, upon paying ten shillings a man, which they readily did, and by this artifice William raised 10,000l. Robert now, in all likelihood, would have lost all his dominions, if the king had not been obliged to return on a sudden to repress the Welsh, who were ravaging Shropshire and Cheshire. At his approach, they retired among the mountains and inaccessible places, and William pursuing them too far, lost more of his men than he destroyed of the enemy's; and all he could do was, to build the castle of Montgomery, which had been demolished. In 1096, the project of the holy war was set on foot by pope Urban II. in which so many princes of Christendom engaged. The design of it was to recover the Holy Land out of the hands of the Saracens. The badge of those who went to it was a red cross wrought in their garments, whence they were termed Croises, and the expedition the Crusade. Robert duke of Normandy was one of the princes who engaged in it; and to defray the expences of his undertaking, he mortgaged his duchy to his brother the king of England, for a sum of money, which William raised on his subjects by the most oppressive methods imaginable. In 1098, William rebuilt London bridge, raised a new wall round the Tower, and erected the famous Hall at Westminster, which, though so large, he found fault with, and said it was scarce big enough for a king's bed chamber. The raising money for these works was a great oppression on the subjects. Being hunting one day in New Forest, he was accidentally, or otherwise, shot with an arrow into the heart, by Walter Tyrrel, a French knight, as he was, seemingly at least, shooting at a deer; and dropt down dead immediately. Thus fell William, surnamed Rufus, from his red hair and florid complexion, after he had lived four and forty years, and reigned near thirteen, during which he oppressed his people in every form of tyranny and insult. He was equally void of learning, principle, and humanity; haughty, passionate, brutal, profligate, and ungrateful; a scoffer at religion; a scourge to the clergy; vain-glorious, talkative, rapacious, lavish, and dissolute, and an inveterate enemy to the English, though he owed his crown to their valour and fidelity, when the Norman lords intended to expel him from the throne. In return for this instance of their loyalty, he took all opportunities to fleece and enslave them; and at one time imprisoned fifty of the best families in the kingdom, on pretence of killing his deer: so that they were compelled to purchase their liberty at the expence of all their wealth; though not before they had undergone the fiery ordeal. He lived in a scandalous commerce with prostitutes, professing his contempt for marriage; and having no legitimate issue, the crown devolved to his brother Henry. He was buried at Winchester, where his tomb, somewhat raised from the ground, remains to this day. In his reign a great innndation of the sea overflowed the coast of Kent, and covered the lands formerly belonging to earl Goodwin. These are now called the Goodwin Sands, so dangerous to ships.

WILLIAM III. of England, and prince of Orange and Nassau, born Nov. 14, 1650, had for his godfathers the States of Holland and of Zealand, the cities of Delf, Leyden, and Amsterdam. The States finding themselves at liberty, by the death of William II. resolved to remedy the inconveniences which might happen from a single governor. They appointed a general assembly to meet, in which it was resolved, That since the country was now without a governor by the death of the prince, the choice of all officers and magistrates, for the time to come, should be in the disposal of the cities; and that not only the ordinary soldiers, but even the guards of the deceased prince, should take an oath of fidelity to the States of Holland: this was unanimously carried. The conduct of Messrs. de Wit being very much disapproved, the prince was in 1672, declared general of the army of the States. At that time they were in a most distressed condition. The French carrying all before them, he immediately repaired to the army. The frontier towns and garrisons in the province of Holland fell every day into the hands of the enemy, which caused insurrections. Dort first led the way, and was followed by other cities. The consequence was, that the prince was declared, in a full assembly of the States, stadtholder, captain, and admiral general of all their forces, as well by sea as by land; and they gave him all the power, dignity, and authority, which his ancestors of glorious memory had ever enjoyed, and things then took a more prosperous turn: not long after, the two de Wits, the great enemies of the House of Orange, were torn to pieces by the people. In 1673 he took the strong town of Naerden, and by his courage and conduct obliged the French to quit Utrecht, and several considerable places where they had garrisons. As an acknowledgment of his services, the States confirmed him in the office of stadtholder, and entailed

this dignity upon the heirs of his body born in lawful wedlock, in an instrument, dated February 2, 1674. The same day the States of Zealand conferred the same administration upon his highness, and declared him chief nobleman of their province. Soon after he went to Utrecht, and made some regulations in the government of that province; and the following proposition being made, 'Whether it were advisable to confer the charge of governor-general, captain, and admiral-general of the province, upon his highness, and his heirs male, lawfully begotten?' they all, *nemine contradicente*, approved the motion, and conferred that dignity upon his highness. Soon after he engaged the French at Senef, where he gained great honour by his courage and conduct, and obtained a victory after a most bloody engagement. In 1675, as an acknowledgment of his great services, the burghers of the duchy of Guelders conferred on him the honour of being hereditary governor of that province; and he reformed several abuses which had got footing during the enemy's usurpation there. On October 17, 1677, the prince embarked for England, and arrived at Norwich the 19th. On November 4, which was his highness's birth-day, he was married to the princess Mary, eldest daughter of the duke of York. In August, 1678, he attacked and defeated the duke of Luxemburgh in his quarters, near the abbey of St. Dennis. In the heat of the action, the prince advanced so far, that he was in great danger of being lost, had not Mons. Puwerkerk, come seasonably to his relief, and killed an officer that was just going to fire a pistol at him. On June 29th, 1684, a treaty was signed at the Hague, which put an end to military operations. In 1688, king James II. of England having conducted his affairs in such a manner as apparently threatened the civil and religious liberties of the nation, a great many persons of eminence and interest in the kingdom, both clergy and laity, deemed it expedient to invite over the prince of Orange. Several of them waited on him at the Hague for that purpose; and the States' general having resolved to assist him, great preparations were made for his expedition. On October 16th, he took his leave of the States, and on the 19th sailed with 50 men of war, 25 frigates, as many fireships, near 400 victuallers and transports, having about 14,000 land forces, accompanied by many of the English nobility and gentry; but was forced back by a storm. He put to sea again, November 1, and landed the 5th at Torbay, and was soon joined by many of the nobility. He advanced towards London; and king James quitting the kingdom, he was invited to London. In the mean time the lords took upon them the government of the kingdom, and agreed to address the prince of Orange to take upon him the administration of all public affairs till a convention should meet. The convention of lords and commons met, January 22, 1688-9, and after some warm debates, voted, that the prince and princess of Orange should be king and queen. The princess arrived February 12, and the next day both houses waited on them, and made a solemn offer of the crown, which was accepted by the prince in the name of himself and his wife, and the same day they were proclaimed king and queen by the names of William and Mary; such was the necessity of the times. The first thing king William did, after he had settled his privy-council, was giving the royal assent, on February 23, to a bill that had passed both houses, 'to remove and prevent all questions and disputes 'concerning the assembling and settling this present par-'liament.' By which act the convention, which had placed the crown on the prince and princess of Orange, was changed into a parliament. From the beginning of the reign of king William and queen Mary, there was a party in the nation who disliked the new settlement, and were in continual plots to overturn it, and to restore the late king James. The king, by the advice of the commons, and being strongly solicited to it by his allies, declared war against France. The king and queen were solemnly crowned by the bishop of London, on April 11, 1689. The parliament, at the king's desire, had passed an act, 'for taking away the tax 'called hearth-money,' which received the royal assent on April 24th. On July 24, the princess Anne of Denmark was delivered of a prince, named William, whom his majesty created duke of Gloucester. The king passed the bill of rights and accession, on December 16, agreeable to the declaration of rights when their majesties accepted the crown, with the addition of a remarkable clause, for excluding papists, and persons marrying papists, for ever from inheriting the crown of England. The revolution in Scotland quickly followed that in England. And an act was presently passed for settling the crown upon the king and queen of England; pursuant to which, their majesties were proclaimed king and queen of Scotland, on April 11, the day of their coronation in England. Then the earl of Argyle and other commissioners were sent to make a solemn tender of the crown to their majesties, in the name of the estates and kingdom of Scotland; which was done on May 11. In the mean time, the duke of Gordon, a papist, still held the castle of Edinburgh for the late king; but a vigorous siege obliged him to surrender it on June 13, upon conditions that he and the garrison should have their lives, liberties, and fortunes secured. And the earl of Dundee being slain in battle, and the forces he had raised in the Highlands dwindling away by degrees, and being at length entirely suppressed, their majesties remained afterwards in the peaceable possession of the crown of Scotland. In Ireland, Tyrconnel had secured the most important places of that kingdom, and used such violence against the protestants, that they were forced to retire to their brethren in the north; who seizing on Kilmore, Coleraine, Inniskilling, and Londonderry, declared for king William and queen Mary. The late infatuated king James now sailed from Brest with some French troops, and landed at Kinsale on the 12th of March, 1688-9. Having taken Coleraine and Kilmore after a stout resistance, he laid siege to Londonderry, on April 20; from whence, a few days after, he departed to meet his parliament at Dublin, where he passed an act to attaint between 2 and 3000 protestant lords, ladies, clergymen, and gentlemen, of high-treason. In the mean time the siege of Londonderry was carried on with the utmost efforts, and the garrison under Mr. George Walker, a clergyman, and major Baker, held out with the most surprising resolution, though reduced to the necessity of feeding upon horse flesh, dogs, cats, rats, and mice, tallow, starch, dried and salted hides, and all kinds of offal; till major-general Kirk arriving with some ships laden with provisions, which, after a long delay, he at last found means, with difficulty, to convey into the town, the besiegers on July 31, thought fit to raise the siege. The garrison of Inniskilling, at the same time, did wonders; particularly the day before the siege of Derry was raised, they advanced near 20 miles to meet about 6000 Irish, and defeated them, killing and drowning near 3000, though themselves were not above 2000, and had but about 20 killed and 50 wounded. King William having passed an act for putting the administration into the hands of the queen whenever he should be out of the kingdom, in June, 1690, landed with a gallant army in Ireland, and on July 1, fought the ever-memorable battle of the Boyne, wherein, though he had the misfortune to lose the brave duke of Schomberg, then 82 years old, yet he gained a complete victory over the French and Irish army, and obliged king James to retire to Dublin, and make all the haste he could back to France. King William, the following Sunday, entered Dublin in triumph, and went to St. Patrick's church to return thanks to God for his victory; and arriving in England the beginning of September, he sent the earl of Marlborough to carry on the reduction of Ireland; who took Cork and Kinsale with such expedition, that he was again at Kensington on October 28. The next year, 1691, the intrepid English, under the brave general Ginckle and other valiant commanders, made themselves masters of Baltimore, with incredible bravery passed the Shannon amidst the fire of the enemy, and took Athlone, and fought the glorious battle of Aghrim on July 12, wherein 4000 Irish and their general St. Ruth were slain; which was soon followed by the surrender of Galloway, and lastly, that,

of Limerick in October (where Tyreonnel died, as it were of grief, on August 14,) by which an end was put to the Irish war, and all Ireland was reduced to the obedience of king William and queen Mary. In England, the king dissolved the convention parliament, on February 6, 1689-90, and a new parliament met on March 20. In the mean time, the French king was pushing his conquests in the Netherlands and other parts, which made it necessary for king William to go over to the famous congress at the Hague, in the beginning of the year 1691, in order to animate the confederate princes and states. The French were so far before-hand with the allies, that they took the strong city of Mons this year, and Namur in the year following; after which was fought the battle of Steenkirk, (king William commanding the confederate army himself, as he did every year during the war,) in which, though the French remained masters of the field of battle, yet king William so bravely disputed the victory, that they had scarcely any thing else to boast of, the loss being nearly equal on both sides. The king was no sooner gone abroad in 1691, but the Jacobites, resumed their favourite scheme, in concert with France, for restoring the late king James. But the vigilance of queen Mary and the government again disconcerted their measures. The parliament meeting towards the end of the year, passed a bill for the frequent calling and meeting of parliaments, commonly called the Triennial Bill; but the king, by the advice of his ministers, refused his assent; as he did also the next year to a bill touching free and impartial proceedings in parliament, being in the nature of what is now called a Place-bill; which so displeased the commons, that they resolved, that whoever advised the king not to give the royal assent to that act, was an enemy to their majesties and the kingdom. However, the parliament insisting upon the Triennial Bill, he thought fit to pass it in 1694, which gave a general satisfaction. Our loss at sea was this year very considerable. For the whole Brest fleet, on June 16, fell upon Sir George Rooke's squadron, which had a fleet of near 100 merchant ships, bound for the Straits, under its convoy, whilst it was separated from the main fleet, which should have convoyed it out of danger, and took, burnt, or sunk four of the greatest Smyrna-ships, three Dutch men of war, and one English, and near 80 other merchant ships. Our honour at sea was in a great measure retrieved this year. The king returned on November 9. On December 28, queen Mary died of the small-pox, to the inexpressible grief of the nation. She was king James's eldest daughter, and died in the 33d year of her age, having reigned near six years jointly with the king her husband. On March 5, she was most solemnly and magnificently interred in Henry VIIth's chapel. In the beginning of the year 1695, the parliament made a strict inquiry into several abuses and corruptions. In this session also, the bad state of the silver coin was first taken into consideration, which by clipping and adulterating had been reduced near half in value, to the great detriment of trade and embarrassment of the public revenue. The remedying of this grievance was not perfected till the next parliament, when all the silver money was ordered to be called in and recoined, and the loss to be borne by the public. This gave rise to Exchequer-bills, or paper-money, which were no sooner set on foot, but the scandalous practice of false indorsement began; for which Mr. Charles Duncomb and Mr. Knight were expelled the house, and committed to the Tower, and Mr. Burton to Newgate. Bills were ordered to be brought in to punish them, which passed the commons, but were thrown out by the lords, who being equally divided upon Duncomb's bill, the duke of Leeds gave the casting vote for rejecting it. In 1695, the English fleet, under lord Berkeley, spread terror along the coast of France, bombarded St. Maloes, and some other towns; and in return, Villeroy, by the French king's order, bombarded Brussels. On the 12th of January, a double plot was about that time discovered, to assassinate the king and invade the kingdom. Many of the late king James's emissaries came over from France, and held consultations with papists and Jacobites here, how to murder king William; and after several debates on the time, place, and manner of putting their horrid design in execution, they at last agreed to assassinate his majesty in his coach, on some day in February, 1695-6, in a lane between Brentford and Turnham Green, as he returned from hunting. But happily the whole plot was discovered by Mr. Pendegrass, the very night before it was to be executed; which was confirmed by Mr. de la Rue, another of the plotters, and afterwards by captain Porter, and others of them, who came in upon the proclamation for apprehending the conspirators. At the same time there was to be an invasion from France, for which purpose king James was come to Calais, and the troops, artillery, and stores, were immediately ordered to be embarked; but by the news of the assassination plot having miscarried, and the speedy sending a formidable fleet under admiral Russel, this other part of the design was frustrated; and Calais was not long after bombarded by the English. When the parliament met, December 3, 1696, the king told them in his speech, that considering the circumstances of affairs abroad, it was his opinion, that England could not be safe without a land force; which clause the commons did not like, as if it were designed to recommend a standing army in time of peace. And so after long debates they resolved, That all the land forces raised since September 29, 1680, should be paid and disbanded. Yet, to show their affection to his majesty, they resolved, on December 20, That 700,000*£*. per annum be granted to him for the support of the civil list. The parliament continued sitting till July 5, 1698, and then was prorogued, and two days afterwards dissolved. In this session the new East-India company was established, the merchants having agreed to advance 2,000,000*£*. to government at 8 per cent. The old company offered to raise 700,000*£*. at 4 per cent.; but this was rejected; though they were afterwards continued a corporation, and the two companies united. On December 6, 1698, the new parliament met, in which, though the king expressed his desire of having a good body of land forces kept up, yet the commons resolved, that all the land forces, exceeding 7000 for England, and 12,000 for Ireland, (all his majesty's natural-born subjects,) should be forthwith paid and disbanded. This made the king very uneasy; but when he saw the parliament in earnest, he complied with a good grace. He would fain have kept his Dutch guards that came over with him at first; but not being able to move the parliament, he with complaisance submitted, and sent them away; which gave great satisfaction to his people. In June, 1699, the king went over to Holland and returned in October. The parliament met on Nov. 16, and in this session were great debates about the Irish forfeited estates, resuming the grants which the king had made of several of them to his ministers, and favourites, and applying all to the use of the public. The commons, in April, 1700, to carry their point, tacked the bill of resumption to the land-tax bill; which occasioned great heats between the two houses, the lords making amendments which the commons would not agree to; when the king, fearing the consequences, sent a private message to the lords to pass the bill without any amendments, and on April 11, prorogued the parliament. The king went over again to Holland in July this year; and on the 29th, unhappily for England, died that hopeful young prince the duke of Gloucester, son to their royal highnesses the prince and princess of Denmark, being about ten years old. The king of Spain dying towards the end of this year, the duke of Anjou was declared king of Spain by the French king his grandfather. And the French, at the same time, overrunning the Spanish Netherlands, both king William and the states were obliged to own the duke of Anjou's title, in order to gain time. His majesty, soon after his return, dissolved the parliament; and at the same time, to please those now distinguished by the name of the Church-party, made some alterations in his ministry. The new parliament meeting in February, 1700-1, the commons chose Robert Harley, Esq. their speaker. The king in his speech

on the death of the duke of Gloucester, having recommended to them a further provision for the succession of the protestant line, after him and the princess, both houses came into it; and on June 12, 1701, his majesty passed the famous act for the further limitation of the crown, and better securing the rights and liberties of the subjects; whereby the crown was further limited to the princess Sophia, electoress dowager of Hanover, and her protestant heirs. She was granddaughter to king James I. by his daughter Elizabeth, queen of Bohemia, and grandmother to his late majesty king George II. His majesty went again to Holland in July, where he made a speech in the assembly of the States, on the posture of affairs in Europe; which had a good effect. The English nation was now divided into parties, for and against a war, the old and new ministry, and the House of Commons, (which had occasioned the famous Kentish petition, and Legion letter, in which the last commons were treated with great scurrility, and even menaces.) But the death of the late king James, on Sept. 5. at St. Germain's, and the French king's declaring thereupon the pretended prince of Wales king of these realms, gave a new turn to people's minds, and made them all unite in a firm adherence to his majesty, and the utmost abhorrence of the indignity put upon him and the nation by the French king. His majesty returned about the end of October, and having dissolved the parliament, called another to meet December 30. The commons again chose Mr. Harley their speaker, and the king made a most excellent speech to both houses on the present posture of affairs, the late insolent step of the French king, the dangers that threatened Europe, by his placing his grandson on the throne of Spain, and the alliances he had made for obviating those dangers; to which both houses returned the most satisfactory addresses. And soon after, the commons addressed his majesty, that it might be an article in the several treaties of alliance, That no peace should be made with France, till his majesty and the nation have reparation for the indignity offered by the French king, in declaring the pretended prince of Wales king of England, Scotland, and Ireland. They then voted 40,000 land forces, and as many for the sea-service. In the midst of these vigorous resolutions, the king, who had been declining in his health for some time, on February 21, 1701-2, fell from his horse, as he was hunting, and broke his right collar-bone; which, joined with his former indisposition, held him in a languishing state till the 8th of March, when, with great composedness and resignation, he expired. During his illness, the royal assent was given by commission to an act for attainting the pretended prince of Wales of high treason; and another for the further security of his majesty's person, and the succession of the crown in the protestant line, &c. Thus died the heroic king William III. in the 52d year of his age, having reigned thirteen years, three weeks, and two days. William III. was in his person of the middle stature, a thin body, and delicate constitution, subject to an asthma and continual cough from his infancy. He had an aquiline nose, sparkling eyes, a large forehead, and a grave solemn aspect. He was very sparing of speech; his conversation was dry, and his manner disgusting, except in battle, when his deportment was free, spirited, and animating. In courage, fortitude, and equanimity, he rivalled the most eminent warriors of antiquity; and his natural sagacity made amends for the defects in his education, which had not been properly superintended. He was religious, temperate, generally just and sincere, a stranger to violent transports of passion, and might have passed for one of the best princes of the age in which he lived, had he never ascended the throne of Great Britain. But the distinguishing criterion of his character was ambition. To this he sacrificed the punctilios of honour and decorum, in deposing his own father-in-law and uncle; and this he gratified at the expence of the nation that raised him to sovereign authority. He aspired to the honour of acting as umpire in all the contests of Europe; and the second object of his attention was, the prosperity of that country to which he owed his birth and extraction. Whether he really thought the interests of the continent and Great Britain were inseparable, or sought only to drag England into the confederacy as a convenient ally, certain it is, he involved these kingdoms in foreign connexions, which has ever since been productive of incalculable evils. In order to establish this favourite point, he scrupled not to employ all the engines of corruption, by which the morals of the nation were totally debauched. He procured a parliamentary sanction for a standing army, which now seems to be interwoven with the constitution. He introduced the pernicious practice of borrowing upon remote funds; an expedient that necessarily hatched a brood of usurers, brokers, and stock jobbers, to prey upon the vitals of their country. He entailed upon the nation a growing debt, and a system of politics big with misery, despair, and destruction. To sum up his character in a few words: William was a fatalist in religion, indefatigable in war, enterprising in politics, dead to all the warm and generous emotions of the human heart, a cold relation, an indifferent husband, a disagreeable man, an ungracious prince, and an imperious sovereign.

WILLING, *a.* inclined, or not averse to do a thing; consenting; desirous; favourable; pleased; ready or condescending; chosen.

WILLINGLY, *ad.* without dislike; without reluctance.

WILLINGNESS, *s.* freedom from reluctance; ready compliance; consent.

WILTSHIRE, an English county, 52 miles in length, and 34 in breadth; bounded on the W. by Somersetshire; on the N. by Gloucestershire; on the E. by Berkshire and Hampshire; and on the S. by Dorsetshire and Hampshire; being 54 miles in length, and 33 in breadth. It contains 301 parishes, 21 market towns, and sends 34 members to parliament. The principal rivers are the Willey, the Adder, the two Avons, the Tems, the Kennet, the Duril, the Nadder, and the Were. The air is generally good, though sharp upon the hills and downs in winter, but milder in the vales and bottoms. The N. part is hilly, the S. level, and the middle full of downs, intermixed with bottoms, wherein are rich meadows and corn-fields. There are several towns in it noted for the woollen manufacture. Here is a famous trench, which runs from E. to W. and is visible for many miles. The common people will have it to be the work of the devil, but it was probably the boundary of the W. Saxon monarchy. Salisbury is the principal town.

WILY, (*wily*) *a.* full of stratagem; sly; cunning; artful; tricking.

WIMBLE, *s.* [*wimpel*, Belg. from *wemelen*, to bore] an instrument with which holes are bored.

WYMONDHAM. See WIMONDHAM.

X.

X IS the twenty-second letter of our alphabet,and a double consonant. Neither the Hebrews nor antient Greeks used it, but expressed it by its componant parts *cs*. Neither have the Italians this letter, but express it by *ss*. X begins no word in the English language, but such as are of Greek original, and we find it in few words but what are of Latin derivation, as *perplex*, *reflexion*, *defluxion*, *axle*, &c. We often express this sound by single letters; as in *backs*, *cracks*, *necks*, &c. by *ks*, in *brooks*, *breaks*, *rocks*; by *cc*, in *access*, *accident*, by *ct*, in *action*, *unction*, &c. The English and French pronounce it *cs* or *ks*. In Numerals, it expresses 10, and as such seems to be made of two V's placed one over the other. When a dash is over it, thus, $\bar{X}$, it signifies 10,000.

XEBE'C, *s.* a small three masted vessel, navigated in the Mediterranean sea, and on the coasts of Spain, Portugal, and Barbary.

XE'RIF, *s.* a title given to a prince, or chief governor, of Barbary.

XIPHOI'DES, (*zifoides*) *s.* [from *xiphos*, a sword, and *eidos*, from, Gr.] in anatomy, the name of a cartilage at the bottom of the sternum, or breastbone, and so called from its resembling the point of a sword.

XY'STUS, *s.* [Gr.] in architecture, a long spacious portico, wherein the athletæ, such as gladiators, wrestlers, &c. exercised.

Y.

Y IS the twenty-third letter of our alphabet; its sound is formed by expressing the breath with a sudden expansion of the lips, from that configuration by which we express the vowel *u*. It is one of the ambigenal letters, being a consonant in the beginning of words, and placed before all vowels, as in *yard*, *youth*, *York*, &c. but before no consonant. At the end of words it is a vowel, and is substituted for the sound of *i*, as in *try*, *fry*, *cry*, &c. In the middle of words it is not used so frequently as *i*, unless in those derived from the Greek, as in *chyle*, *empyreal*, *type*, &c. although it is admitted into some pure English words, as in *dying*, *crying*, *prying*, &c. Y was much used by the Saxons, whence it is found for *i* in our English writers. Y is also a numeral, signifying 150, and with a dash over it 150,000.

YACHT, YATCH, or YA'CHT, (*yaut*) *s.* a small ship, generally used in conveying state passengers.

YA'RMOUTH, GREAT, a considerable sea-port of Norfolk, seated on the river Yare, by means of which it has the export and import trade of Norwich, and various places in Norfolk and Suffolk; 22 miles E. of Norwich, and 124 N. E. of London. Its foreign trade (in time of peace) is chiefly to the Baltic, Holland, Portugal, and the Mediterranean. It also sends ships to the Greenland fishery. The home fishing is carried on at two seasons, that for mackarel in May and June, and that for herrings in October and November. Of these last, 50,000 barrels are generally taken and cured in one year. Yarmouth is much frequented in the season as a place for sea-bathing. The town consists of about 1560 houses, and there are a few pretty wide streets, and a spacious market place. A lofty steeple here serves as a landmark for those at sea; but which ever way it is viewed it appears crooked. Off the mouth of the harbour is a bar, which prevents the entry of ships of large burden; and the roads E. of the town, within the dangerous sands and banks of the offing, are much frequented, though noted for frequent shipwrecks. Market on Wednesday and Saturday.

YE'STERDAY, *s.* [*gistandag*, Sax.] the day last past; the day immediately preceding the present. Adverbially, on the day last past.

YE'STERNIGHT, *s.* the night last past. Adverbially, on the night last past.

YET, *conj.* [*gyt*, or *get*, Sax.] nevertheless; notwithstanding; however. "*Yet* these imperfections being balanced by great virtues.' *Dryd.*

YET, *ad.* beside; over and above; more than has been mentioned. "This furnishes us with *yet* one more reason." *Atterb.* Still; without any alteration. "While they were *yet* heathens." *Addis.* Once more. "*Yet, yet*, a moment." *Pope.* Used with a negative before it, at this time, or so soon. "Thales being asked when a man should marry, said, Young men not *yet*, old men not at all." *Bacon.* At least; hitherto. It denotes increase or extension to the sense of the words to which it is joined. It is used as a kind of emphatical addition to a negative, importing even; after all. "If any man neglect his duty, his fault must not be ascribed to to the rule appointed, neither *yet* to the whole church." *Whitgift.*

YEW, *s.* a tree that grows naturally in England, and is of great use to form hedges for the shelter of exotic plants. It grows best in a moist loamy soil, and bears transplanting even when old. The wood is converted into bows, axletrees, spoons, cups, cogs for mill-wheels, and floodgates for fishponds, which hardly ever decay.

To YIELD, (*yeeld*) *v. a.* [*geldan*, to pay, Sax.] to produce; to afford; to give as a due; to allow. "I *yield* it just." *Milt.* Used with *up*, to resign or surrender. Neuterly, to submit as conquered; to comply; to admit or allow; to give place to as an inferior in excellence, or any other quality.

YORE, or OF YORE, *ad.* [*geogara*, Sax.] long; of old time, or long ago. "He hath polished oft [and *yore*." *Spenser.*

YORK, a city of Yorkshire, of which it is capital, with an archbishop's see. It is seated on the river Ouse, and is generally counted the second city in England, though now surpassed in wealth and population by many of the more modern trading towns. It is certainly a very antient place, and has undergone various revolutions; but is still a large beautiful city, adorned with many fine buildings, both public and private; is very populous, and inhabited by gentry and wealthy tradesmen. It contains about 30 parish churches and chapels, besides its cathedral, or minster, which is a most magnificent structure. It is divided by the river into two parts, which are united by a stately stone bridge of five arches. The eastern part is most populous, the houses standing thicker, and the streets being narrower. It is surrounded by a strong wall, on which are many turrets, or watch-houses; and there are four gates, and five posterns. It is a city and county of itself, enjoys large privileges, sends two members to parliament, and has the title of a duchy. It is governed by a lord mayor, 12 aldermen, and other officers; and its county contains 26 villages and hamlets. It is 65 miles S. by E. of Durham, 81 E. of Lancaster, and 190 N. by W. of London. Markets on Tuesday, Thursday, and Saturday.

YO'RKSHIRE, an English county, bounded on the E. by the German Ocean; on the N. by the county of Durham; on the W. by Westmoreland and Lancashire; and on the S. by Derbyshire, Nottinghamshire, and Lincolnshire. It is the largest county in England, being 90 miles in length, from E. to W. and 80 in breadth from N. to S. It contains 563 parishes, 60 market towns, and sends 30 members to parliament. The principal rivers are the Tees, that divides this county from Durham; the Swale, the Youre, the Nyde, the Ouse, the Warf, the Are, the Calder, the Derwent, the Dun, and the Hull; besides the great river Humber, which is made up of many rivers. The air is in general temperate, but pretty cold on the tops of the hills, and on the borders of Durham. The soil in some places is very fruitful, in some barren, gravelly, and stony, and in others moorish, miry, and fenny. It is divided into three Ridings, the North, West, and East; besides which there is a fourth division, called Richmondshire, as also Cleveland, Craven, and Holderness, which are all included in the three Ridings. In so extensive a county the productions must be various, as well as the

manufactures; and there are mines of iron, lead, and coal. York is the principal place.

YORK, NEW, one of the United provinces of North America. It is bounded on the E. by Massachusetts Bay; on the N. by Canada; on the S. by New Jersey; and on the W. by Delaware River. It produces corn, abounds in cattle, and has a good breed of horses; and the inhabitants are much employed in fisheries. They export a great deal of dried and salted fish to Europe; as also log-wood, train-oil, and whalebone.

YORK, NEW, a city of N. America, capital of the above state. It is seated at the S. W. point of an island, at the confluence of Hudson and East Rivers, and is about four miles in circumference. The situation is both healthy and pleasant. Surrounded on all sides by water, it is refreshed by cool breezes in summer, and the air in winter is more temperate than in other places under the same parallel. York island is 15 miles in length, and hardly one in breadth. Except that of Rhode Island, the harbour of New York, (which admits ships of any burden,) is the best of the United States. A few houses here are built after the old Dutch manner, but the English taste has prevailed almost a century. In time of peace, more commercial business is done here than in any other port in the United States. The number of inhabitants is generally reckoned to be about 50,000. Lat. 40 43. N. lon. 74. 5. W.

YO'TCHEOU, a city of China, of the first rank, in the province of Houquang, situated on the Tonting Lake, and on the Yongtse river, 675 miles S. of Pekin.

YOU, (*yū*) *pron.* [*yow*, the accusative plural of *thu*, thou, Sax.] This word is used when we speak to more than one; but by custom has been applied, by way of ceremony, even when we address a single person. It is sometimes used indefinitely for any person, in the same sense as *on*, Fr. "But as *you* come near it, *you* see nothing but a long heap of heavy disjointed clods." *Addison.*

YOUGHALL, a considerable town of Ireland, in the county of Cork. It has a very commodious harbour, and a fine, well-defended quay. It is seated at the mouth of the river Blackwater, 25 miles N. by E. of Cork.

YOUNG, (*yŭng*) *s.* [*yeong*, Sax. *jong*, Belg.] not born many years; being in the first part of life. Figuratively, ignorant, unexperienced. Applied to vegetables, newly grown.

YOUNG, (*yŭng*) *s.* the offspring of animals collectively.

YOUNGISH, *a.* somewhat young.

YOUNGSTER, or YOUNKER, (*yŭnker*) *s.* [the first word is only used] a young person; a word of contempt.

YOUR, (*yūre*) *pron.* [*eower*, Sax.] belonging to you. It seems to be rather the genitive plural of *yower*, from *ge*, you, Sax. and on that account is seldom used but when we speak to more than one, unless when we compliment a person; and in that sense it is that we add the *s* final, a sign of the genitive singular, more particularly so when the substantive goes before, or is understood. "'Tis managed by an abler hand than *your's*." *Dryd.* "It is *your's* to transmit." *Pope.*

YOURSELF, (*yūrsĕlf*) *pron.* [from *your* and *self*] you, exclusive of any other.

YOUTH, (*yūth*) *s.* [*yeguth*, Sax.] that part of life which is between childhood and manhood, generally reckoned from 14 to 28; adolescence; a young man. Young men, used collectively.

YOUTHFUL, (*yūthful*) *a.* young; suitable to youth; vigorous; playful.

YUCK, *s.* [*jocken*, Belg.] the itch.

YULE, *s.* [*yeol*, *geol*, or *yehul*, Sax.] the time of Christmas, or Christmas tide.

YUN NAN, a province of China, S. of Setchuen and Thibet. It contains 21 cities of the first rank, and 55 in the second and third, and is well watered with rivers and lakes, which render it very fruitful. Gold is very often found in the sands of the rivers, and probably there are mines of the same metal in the mountains of the eastern part. There are also copper mines, several sorts of precious stones, beside musk, benjamin, lapis lazuli, and very fine marble, some of which is painted of divers colours. They have also excellent horses, which are strong and vigorous, but low; as also very small deer, which are kept for their amusement.

YUNNAN, a city of China, of the first rank, capital of a province of the same name. It is 1152 miles S. S. W. of Pekin.

YU'NNING, a city of China, of the first rank, in the province of Honan. It is 430 miles S. of Pekin.

YUX, *s.* [*yeox*, Sax.] the hiccough. It is sometimes pronounced *yex*.

Z.

Z IS the twenty-fourth letter, and nineteenth consonant of our alphabet; the sound of which is formed by a motion of the tongue from the palate downwards and upwards to it again, with a shutting and opening of the teeth at the same time. This letter sounds like the hard *s*, though some reckon it a double consonant, having the sound of *ds*; but to this others object, since we often double it, as in *puzzle*, *muzzle*, *guzzle*, &c. Among the antients, Z was a numeral, signifying 2000, and, with a dash over it, thus, $\bar{Z}$, it signified 2000 times 2000, or four millions. It is placed before all vowels, as in *zany*, *zeal*, *zinc*, *zodiac*, *Zurich*; but before none of the consonants, except *l*, as in *puzzle*, *guzzle*, &c.

ZACHARIAH, or ZECHARIAH, a canonical book of the Old Testament, containing the predictions of Zecharial., the son of Barachiah, and grandson of Iddo. He is the eleventh of the twelve lesser prophets. He entered upon the prophetic office at the same time with Haggai, *i. e.* about 527 years before the Christian æra, and was sent to the Jews upon the same message, to reprove them for their backwardness in erecting the temple, and restoring divine worship; but especially for the disorder of their lives and manners, which could not but derive a curse upon them. This prophet is the longest and most obscure of all the lesser prophets, his style being interrupted, and without connexion.

ZAFFER, ZAFFAR, ZAFFIR, or ZAFFRE, *s.* in chymistry, the name of a blue substance, of the hardness of stone, and generally supposed to be a native fossil; but really is a preparation of cobalt, *i. e.* the calx of that mineral mixed with powdered flints, and wetted with water.

Holland; by the Scheldt on the E. from Brabant; by the Hont from Flanders; and on the W. it is bounded by the German Ocean. It comprehends 8 islands, 3 of which are pretty large. Their names are Walcheren, Schowen, S. Beveland, N. Beveland, Tolen, Doveland, Wolferdike, and St. Philip. There are likewise 6 or 7 others, of little importance. The inhabitants defend themselves from the encroachments of the sea by their dikes, which, at the bottom, are generally 25 German ells in breadth, and are so wide at top, that two carriages may pass abreast. In high tides and stormy weather, the waves, however, often force a passage, and even flow over them. The inhabitants in general are extremely wealthy, being maintained by their plentiful fisheries, and trade with foreign nations. The soil is fruitful in these islands, but the air unhealthy for strangers, though not for the natives.

ZE'ALAND, NEW lies between 34 and 48 degrees south latitude, and between 166 and 180 degrees east longitude. It consists of two large islands, separated by a strait, about 5 leagues broad, called Cook's Straits. The inhabitants are robust, of a dark complexion, fierce, and warlike.

ZE'ALAND, an island of Denmark, in the Baltic, almost of a round form, and about 700 miles in circumference. It is bounded on the N. by the Scaggerack; on the E. principally by the Sound; on the S. by the Baltic; and on the W. by the Great belt. The coast is much intersected with large bays; and within the country are several lakes, which, together with the rivers, abound in fish. In most parts is plenty of wood, except towards the centre of the island, where turf is generally used for fuel. It is the largest of the isles of Denmark, and exceedingly fertile; producing grain of all sorts, and in great plenty, and abounding with excellent pasture. It is particularly famous for its breed of horses. Copenhagen, the capital of Denmark, is seated on the east shore of this island, in lat. 55. 41. N. and lon. 12. 35. E.
